Growth with Purpose: Powering a Sustainable Digital Future

In an era of rapid digital expansion, growth is not just about scaling up—it's about doing so with intention, responsibility and a deep commitment to sustainability. At STT GDC, we are dedicated to growth with purpose, ensuring that every investment, every facility we build and every innovation we adopt not only meets the rising demands of the digital world but also contributes to a more sustainable digital future. By integrating renewable energy sources and cutting-edge energy-efficient technologies into our operations, and by empowering people and communities, we are shaping a future where progress and sustainability are seamlessly intertwined. As we continue to expand our global footprint, we remain steadfast in our mission to power a future where digital advancement and environmental stewardship go hand in hand.

About STT GDC

ST Telemedia Global Data Centres (STT GDC) is a leading data centre provider founded and headquartered in Singapore since 2014.

STT GDC offers a full suite of best-in-class and end-to-end data centre solutions designed to help our customers respond dynamically to change and adapt to growing demand for colocation, connectivity and support services.

Our portfolio includes over 100 data centres* with an IT load of more than 2GW across mature and emerging business markets including Singapore, the United Kingdom (UK), Germany, Italy, India, Malaysia, Thailand, South Korea, Indonesia, Vietnam, Japan and the Philippines.

Powering a sustainable digital future

A growing global data centre platform that helps the world to connect

17 Data centres in the **UK**
Total IT load: >300MW

13 Data centres in **Germany**
Total IT load: >260MW

1 Data centre in **Italy**
Total IT load: 42MW

30 Data centres in **India**
Total IT load: 390MW

3 Data centres in **Thailand**
Total IT load: 48MW

3 Data centres in **Malaysia**
Total IT load: >130MW

6 Data centres in **Singapore**
Total IT load: >110MW

2 Data centres in **Japan**
Total IT load: >70MW

1 Data centre in **South Korea**
Total IT load: 30MW

7 Data centres in **the Philippines**
Total IT load: >150MW

2 Data centres in **Vietnam**
Total IT load: >69MW

4 Data centres in **Indonesia**
Total IT load: >90MW

*Data centre figures include operational sites, sites under development and sites held for future development capacity.
For the UK, Germany and Italy markets, the business operates under the VIRTUS Data Centres brand.

About the Report

This is STT GDC's fifth Environmental, Social and Governance (ESG) report, our latest annual publication dedicated to providing information on our ESG performance that is material to STT GDC's business and stakeholders.

These voluntary disclosures set out our sustainability approach, targets, milestones and strategies, and highlight our commitment to transparency and accountability, underscoring our dedication to embedding sustainability into every aspect of our business.

This report contains a full year's data from 1 January to 31 December 2024, focusing primarily on STT GDC entities under our operational control, including those in Singapore, India, UK, Indonesia, Japan and South Korea.

Reporting principles and standards

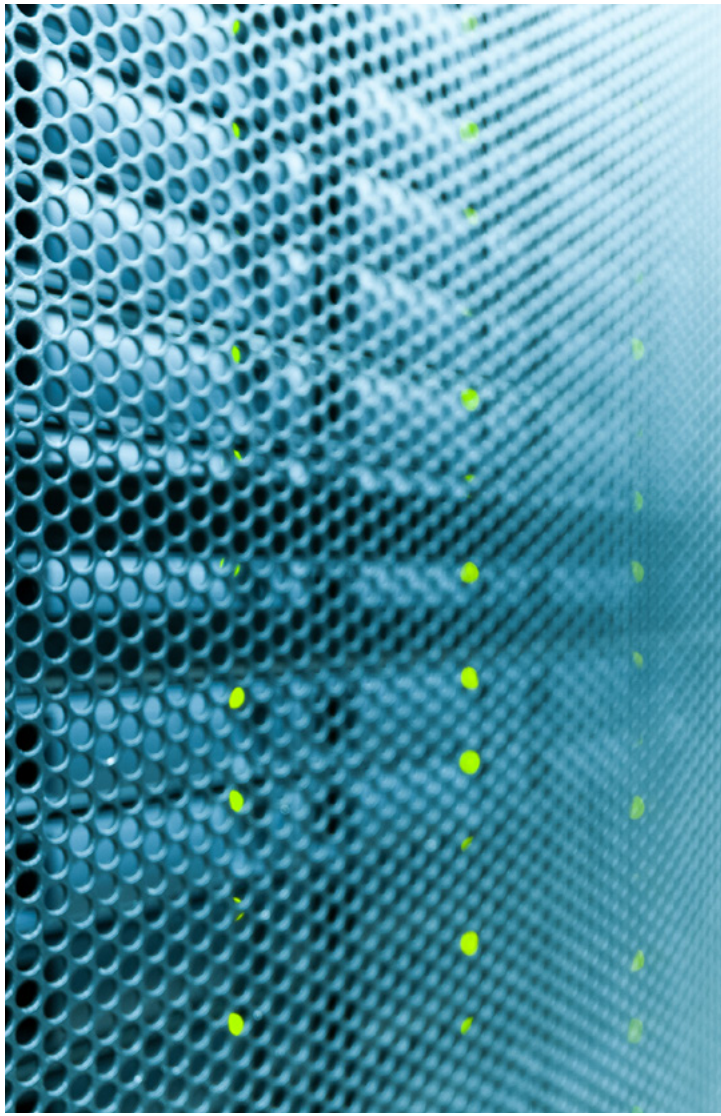

In line with our commitment to transparent and comprehensive reporting, this report has been prepared in reference to the Global Reporting Initiative (GRI) Universal Standards 2021. The GRI Content Index can be found here.

This report also references global reporting standards and frameworks including the United Nations Sustainable Development Goals (SDG), Sustainability Accounting Standards Board (SASB) and Task Force on Climate-Related Financial Disclosures (TCFD).

External assurance

DNV was engaged to provide limited assurance for a selection of sustainability disclosures that are most material to our business. The Independent Assurance Statement can be found here.

We value input from our stakeholders to enhance our reporting and sustainability practices. Please direct these comments to ESG@sttelemediagdc.com.

CEO's Message

Bruno Lopez

President and Group CEO

In an increasingly interconnected world, data centres form the backbone of global digital infrastructure, empowering businesses, communities and individuals to connect and thrive. At STT GDC, we understand that as the digital landscape evolves, our role is not only to support this growth but to lead with sustainable and innovative solutions at the heart of our operations. As we reflect on 2024, I am proud to share the progress we have made in our journey toward a more sustainable and resilient future. Looking ahead, we remain committed to advancing our mission to deliver robust, efficient and sustainable data centre solutions that propel the digital economy forward.

Advancing our carbon neutrality ambitions

In 2024, we continued to make substantial strides toward our goal of achieving carbon neutrality by 2030. We have significantly expanded our renewable energy usage across key markets, enhanced our energy efficiency and integrated cutting-edge technologies. A notable milestone was our pioneering deployment of hydrotreated vegetable oil (HVO) in Singapore, making us the first data centre operator in the country to transition to this sustainable fuel for backup generators. Our initial deployment marks the beginning of a broader shift towards this cleaner energy alternative across our facilities.

We also took a bold step in AI-driven efficiency, announcing a partnership with Phaidra to become the first data centre operator in Asia to pilot its AI-powered control systems for optimising data centre cooling. This initiative sets a new industry benchmark by testing AI-driven optimisation in a hybrid cooling environment — a more challenging setting compared to traditional air-cooled data centres.

Strengthening our sustainability commitments through financing

The start of 2024 saw our successful issuance of S$500 million in Sustainability-Linked Perpetual (SLP) securities, which attracted strong interest from top-tier institutional investors. Our debut perpetual securities offering, this issuance marked several industry firsts—the first Singapore dollar-denominated SLP, the first public benchmark SLP in Asia and the first publicly issued perpetual security by a pure-play data centre globally.

Building on this momentum, we further strengthened our commitment to sustainable finance by launching our enhanced Sustainability-Linked Financing Framework in August 2024, setting even more ambitious targets for our environmental performance. The overwhelming response to our maiden perpetual securities issuance endorses our continued drive to push sustainability boundaries, reaffirming our approach towards responsible growth as we expand in the rapidly evolving global digital economy.

Empowering people and communities

Beyond reducing our environmental impact, we are committed to making a positive difference in the communities where we operate. Our focus on creating a safe and healthy work environment enabled us to achieve a TRIR of 0.1 in 2024. Additionally, we invest in our workforce by dedicating an average of 23.5 training hours annually per employee, empowering each team member with the skills and knowledge they need to excel.

Sustainability is not a destination but a journey—one that requires bold action, collaboration and innovation. At STT GDC, we are committed to setting new benchmarks for responsible growth, driving positive change across our industry and ensuring that the digital infrastructure we build today supports a sustainable and resilient future. As we continue to expand our business, we do so with a strong sense of purpose and a commitment to sustainability. We invite our partners, customers and stakeholders to join us in powering a sustainable digital future together.

Leadership Roundtable

Sustainable data centres of the future — Navigating challenges, unlocking opportunities

Nelson Lim

Group Chief Financial Officer

Daniel Pointon

Group Chief Technology Officer

How are emerging technologies like AI, automation and next-gen cooling systems shaping the future of sustainable data centres?

Daniel: Emerging technologies like AI, automation, and advanced cooling systems are transforming the future of sustainable data centres at scale. AI, for instance, is capable of enhancing operational efficiency and sustainability by optimising cooling management. This is particularly crucial as AI and other accelerated computing workloads continue to grow, requiring higher power densities and more efficient cooling solutions. Our collaboration with AI specialists to host GPU clusters in our data centres, utilising innovative liquid cooling technologies, underscores our commitment to environmental stewardship.

Automation, when integrated with AI, allows for precise control over data centre operations. This synergy enables us to manage complex systems more effectively, reducing inefficiencies and enhancing sustainability. By automating routine tasks, we can focus on strategic initiatives that drive innovation and sustainability. This approach not only improves operational efficiency but also supports our broader ESG goals.

Advanced cooling systems are another critical area of focus. We have invested in liquid cooling technologies, which offer superior efficiency compared to traditional methods, reducing the PUE to between 1.06 to 1.15. Our trials with various liquid cooling systems have led to the development of flexible colocation products designed to support high-density AI and other high-performance computing workloads sustainably. This not only reduces energy consumption but also enables our customers to achieve greater compute efficiency.

Looking ahead, data centres will be designed as intelligent, adaptive, and sustainable facilities. The integration of AI and machine learning will enable autonomous management and predictive maintenance, streamlining operations and enhancing efficiency. We envision data centres strategically located near renewable energy sources, forming integrated energy and data centre campuses. This approach will not only reduce environmental impact but also ensure scalability and resilience, aligning with our vision for a more sustainable future.

How does sustainability-linked financing, such as STT GDC's recent SLP issuance, align with our business growth objectives?

Nelson: Sustainability-linked financing offers businesses a strategic pathway to integrate sustainability performance with access to capital. Our issuance of Sustainability-Linked Perpetual (SLP) securities exemplifies this approach, aligning our financing directly with measurable sustainability targets. By doing so, we're aligning our capital structure with our long-term vision for a sustainable future, reinforcing our commitment to environmental responsibility. This strategy also diversifies and expands our debt investor base, enabling us to access capital on more competitive terms, providing the financial flexibility needed to expand our infrastructure and meet the growing demand for data centre services.

The SLP issuance presents a unique opportunity for us to drive long-term growth in the rapidly evolving digital economy. As demand for data centre services continues to rise, aligning our financing strategy with sustainability goals enables us to attract forward-thinking investors who share our commitment to responsible growth. The favourable response to our SLP issuance, coupled with our enhanced Sustainability-Linked Financing Framework, underscores our strong position in both the financial and sustainability markets.

What do you see as the biggest disruptors or opportunities in the data centre industry over the next five to 10 years, particularly from an ESG perspective?

Nelson: As we look ahead to the next five to 10 years, the data centre industry is poised for significant transformation, driven in part by the escalating demand for data-driven sustainability insights. Investors and financial institutions are increasingly seeking more than just broad commitments to environmental responsibility; they require detailed transparent data that quantifies progress in energy efficiency, carbon reduction and resource management. The integration of ESG criteria into investment evaluations means that the ability to provide reliable sustainability data will become a crucial factor in securing investment and maintaining access to capital. This data will not only influence financing decisions but will also inform our strategic direction, enabling us to align our business growth with the evolving expectations of a sustainability-conscious market.

Daniel: The data centre industry is on the cusp of a transformative period, with several key trends set to reshape its landscape over the next five to 10 years. From an ESG perspective, one of the most significant opportunities will be the integration of renewable energy sources, including solar, wind, hydrogen and potentially nuclear energy. The demand for green electrons flowing into data centres is expected to continue growing, driven by both regulatory pressures and stakeholder expectations.

Hydrogen, as a clean fuel, presents considerable potential for large-scale energy storage and could provide a reliable, low-carbon power solution for data centres. However, its widespread adoption will require addressing several challenges, including high production costs, complex storage and transportation logistics, and the need for significant infrastructure development to scale its use.

Small modular nuclear reactors (SMRs) are also gaining traction as a reliable, low-carbon energy source for data centre campuses. They offer a stable, continuous power supply, which is crucial for data centres, while significantly reducing the industry's carbon footprint. As the industry continues to evolve, these emerging energy solutions will play a pivotal role in shaping the future of sustainable data centre operations.

2024 Sustainability Highlights

Environmental footprint

▼ **66.2%**
Carbon intensity from 2021 baseline

78.5%
Renewable energy factor (REF)

51.3%
of our data centres externally certified as green data centres

▼ **22.9%**
Carbon footprint from 2023 to 333,771 MT CO_2e

▼ **11.2%**
Power usage effectiveness (PUE) from 2020 to average of 1.47

▼ **34.5%**
Water usage effectiveness (WUE) from 2020 to average of 0.73

Social progress

Safety

Launched digital platform to streamline collection and monitoring of EHS data across global operations

▲ **54.7%**
year-on-year to 25.6 million manhours worked

0.1
Total Recordable Incident Rate

0
Serious injury or fatality

Diversity

22.7%
women representation across the group

Community development

Over 2,000 lives positively impacted through community service since 2018

Talent management

Adopting a more comprehensive approach to employee evaluation by integrating core values, critical skills and leadership behaviours into our Performance Management Framework

23.5
average training hours per employee

Responsible business

Sustainable financing

Enhanced Sustainability-Linked Financing Framework with more ambitious environmental goals

SG$500 million
Successful issuance of Sustainability-Linked Perpetual (SLP) securities, which garnered strong interest from top-tier institutional investors

Climate risk resilience

Conducted a quantitative scenario analysis in 2024 to evaluate the two most critical climate-related physical risks to our operations

Green buildings

First data centre in India to achieve the IGBC Net Zero Energy certification

Cybersecurity

Integrated our IT and Operational Technology (OT) cybersecurity policies to create a balanced approach that prioritises both operational uptime and security

Great Place to Work®

Our Sustainability Journey

2021

Launched ESG strategy: Rolled out our comprehensive ESG strategy, outlining our long-term vision and concrete sustainability goals to guide our global operations.

First data centre operator in Asia to pledge carbon neutrality by 2030: Made a bold commitment to achieving carbon neutrality by 2030, setting a new industry benchmark for environmental responsibility.

Published inaugural ESG report: Released our first-ever ESG report, offering a transparent overview of our progress, challenges and the steps we are taking to meet our sustainability objectives.

Implemented Group Minimum Safety Standards: Align safety culture, procedures and systems across all sites through a common global standard.

2022

Unveiled Sustainability-Linked Financing Framework: Strengthened our commitment to sustainability by introducing a Sustainability-Linked Financing Framework. This innovative approach ties our financing structures to specific, measurable ESG targets, ensuring alignment with our group-wide sustainability strategy.

Enhanced Sustainability Governance: We introduced the Group ESG Steering Committee, composed of senior management, alongside a dedicated ESG Working Committee at the operational level. This strengthened governance structure ensures that sustainability is embedded in decision-making across all levels of the company.

Linking ESG Targets to senior management remuneration: Embedded ESG targets into senior management's key performance indicators, ensuring accountability in driving our sustainability agenda.

2023

Collaboration with AI Players for GPU Clusters: Announced a groundbreaking collaboration with leading AI players to host their GPU clusters within our data centres. This partnership leverages cutting-edge liquid cooling technologies, aligning with our commitment to energy efficiency and reducing the environmental footprint of next-gen workloads.

Embarked on AI-powered cooling optimisation: Launched a pilot project to utilise AI technology for optimising cooling efficiency in selected data centres in Singapore.

2024

Established Energy and Water Efficiency Committee: Introduced cross-functional committee to share best practices and adopt a holistic review of water and energy efficiency across all our systems.

Issued S$500 million of Sustainability-Linked Perpetual (SLP) securities: Our maiden perpetual securities issuance, this is the first-ever Singapore dollar denominated SLP, the first public benchmark SLP in Asia and the first public SLP by a data centre company globally, underscoring our commitment to sustainable finance.

Enhanced Sustainability-Linked Financing Framework: Expanded and enhanced our Sustainability-Linked Financing Framework, setting even more ambitious targets that reinforce our commitment to achieving higher ESG performance standards.

First data centre operator in Singapore to deploy HVO for backup generators: Announced deployment of HVO across our facilities in Singapore, starting with an initial deployment of 500,000 litres.

Our Commitment to ESG Excellence

At STT GDC, we believe that sustainable practices are not just beneficial, but essential to the future of the data centre industry. Our ESG strategy is built on this core principle, shaping every aspect of our operations and guiding us towards a more responsible and sustainable digital future.

Environmental Stewardship

We take proactive steps to minimise our environmental impact, prioritising energy efficiency and resource conservation across all facets of our business. By implementing cutting-edge technologies and innovative solutions, we work relentlessly to reduce our carbon and water footprints. Our commitment to sustainability is exemplified by our ongoing transition to renewable energy sources and efforts to optimise energy consumption in our data centres.

Social Responsibility

Our focus on social responsibility drives our efforts to protect the well-being of our employees, partners and communities. We ensure the safety and health of our workforce through stringent health and safety measures and invest in initiatives that foster community growth, such as skills development programmes to nurture the next generation of talent in the data centres sector. We also champion diversity and inclusion, creating an environment where all voices are heard and valued.

Governance and Integrity

We adhere to the highest standards of governance, ensuring transparency, accountability and ethical business practices in all our dealings. We place a strong emphasis on integrity across our operations, fostering trust and strengthening relationships with stakeholders. Our commitment to governance extends to rigorous cybersecurity practices and responsible procurement.

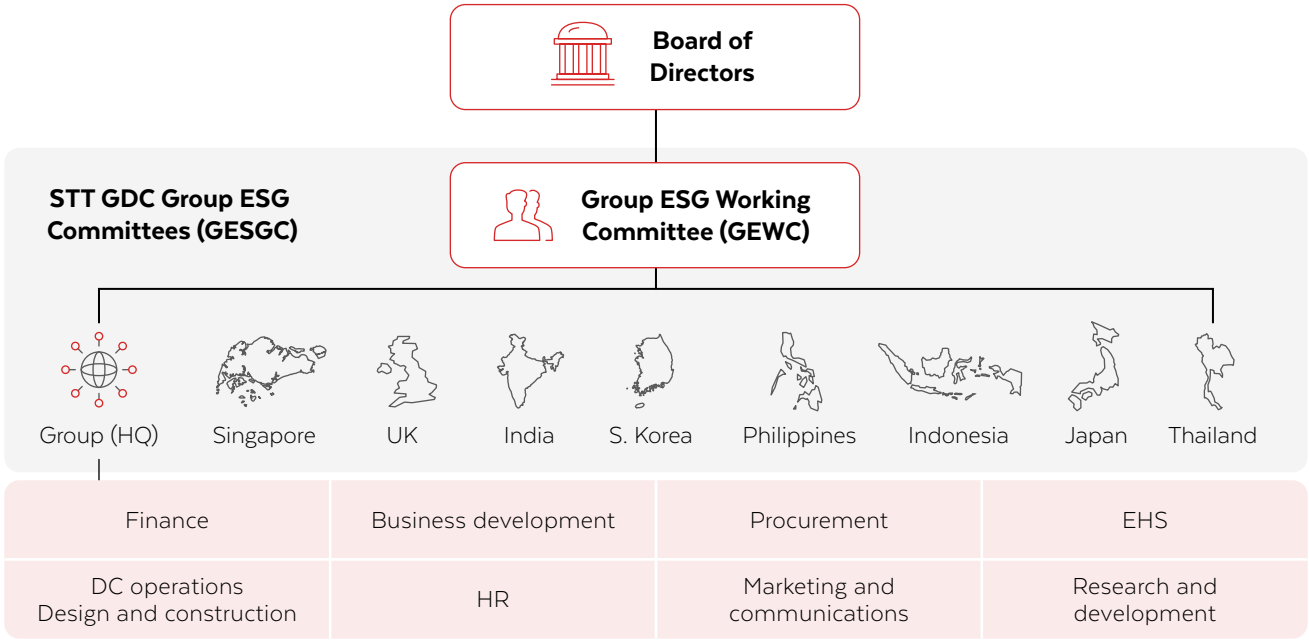

ESG Governance

A robust governance framework has been established to ensure the effective and efficient management of ESG issues throughout all aspects of our business, with ultimate accountability resting with the Board of Directors, which provides strategic direction and oversight, while the Group ESG Working Committee spearheads the execution of sustainability initiatives.

Recognising the pivotal role of senior management in driving the success of ESG initiatives, we have integrated ESG targets into the KPIs and incentive plans of our top executives. This alignment fosters greater accountability and ownership across the company as we advance our sustainability agenda.

Guided by Group ESG, the GEWC consists of representatives from key functions across the Group and various geographies. The committee's mandate is to drive the acceleration and implementation of ESG plans and initiatives across the Group.

Figure 1: STT GDC ESG governance framework

In addition to identifying and addressing critical challenges, the GEWC serves as the primary forum for cross-functional collaboration and the exchange of best practices, fostering an integrated and coordinated approach to ESG management. Through its efforts, the GEWC plays a pivotal role in ensuring that ESG principles are embedded in STT GDC's corporate strategy, governance and operations, advancing our commitment to shaping a responsible and sustainable digital future.

In addition to holding regular meetings with the Group ESG Working Committee, Group ESG embarked on a series of roadshows with various group functions. These roadshows served multiple purposes: to update stakeholders on STT GDC's ESG performance, to deepen their understanding of the interconnection between their functions and ESG, and to foster increased collaboration. The team also collaborated closely with the local market teams, particularly those newer to the group, providing them with the necessary support to align with STT GDC's ESG goals.

Integrating ESG into our Core Values

Figure 2: ESG framework

Our Values

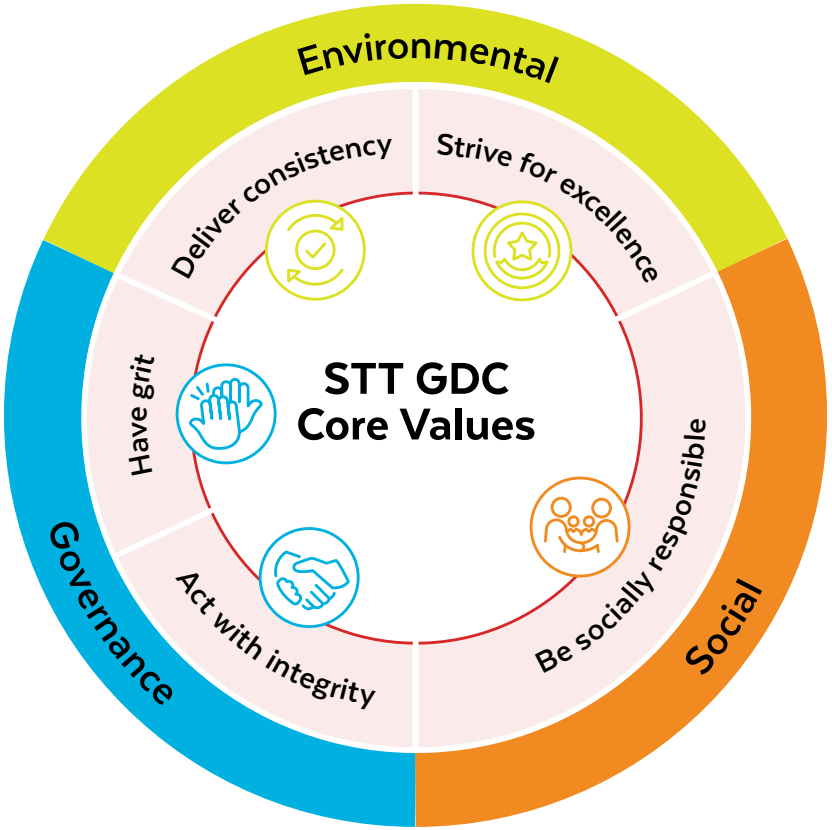

Strive for excellence
By challenging assumptions and pushing boundaries through a culture of innovation, we will continuously improve and excel.

Deliver consistency
By creating responsible, dependable, and replicable business processes across our network, we will establish trustworthiness and demonstrate accountability.

Be socially responsible
By adopting a socially responsible mindset and respecting the differences that define us, we will always do right by people and planet.

Have grit
By embracing a can-do attitude and going the extra mile, we persevere through complex challenges with the passion and strength of character needed to succeed.

Act with integrity
By committing to our promises and genuine transparency, we will operate with a productive spirit of candour and openness.

Environmental

- Energy efficiency
- Energy management
- Water stewardship
- Waste management

Social

- Health, safety and well-being
- Diversity and inclusion
- Human capital management

Governance

- Governance and integrity
- Economic vitality of communities and supply chain
- Climate risk resilience
- Responsible procurement
- Cybersecurity

Our Sustainable Ecosystem

We are driving the sustainable evolution of the digital landscape throughout our value chain, collaborating closely with customers, suppliers, partners and local communities. Our goal is to foster economic growth and pave the way for a sustainable digital future by delivering a differentiated service grounded in scalability, resilience and operational excellence.

Our Suppliers

Design and build

Designing and building data centres in line with globally and locally recognised green building certifications with best-in-class efficiency

Procurement

Incorporating ESG criteria into our Supplier Code of Conduct and due diligence processes, prioritising suppliers with a demonstrated commitment to responsible practices

Our Operations

Operations

- Collaborating closely with customers to ensure alignment of ESG ambitions and initiatives
- Employing a robust Plan Do Check Act framework to effectively manage energy consumption, supported by sophisticated building management systems to monitor usage

Energy

- Harnessing clean energy sources
- Continually exploring innovative technologies to reduce consumption and emissions, leveraging innovations such as artificial intelligence (AI), fuel cells, hydrotreated vegetable oil (HVO) and clean hydrogen

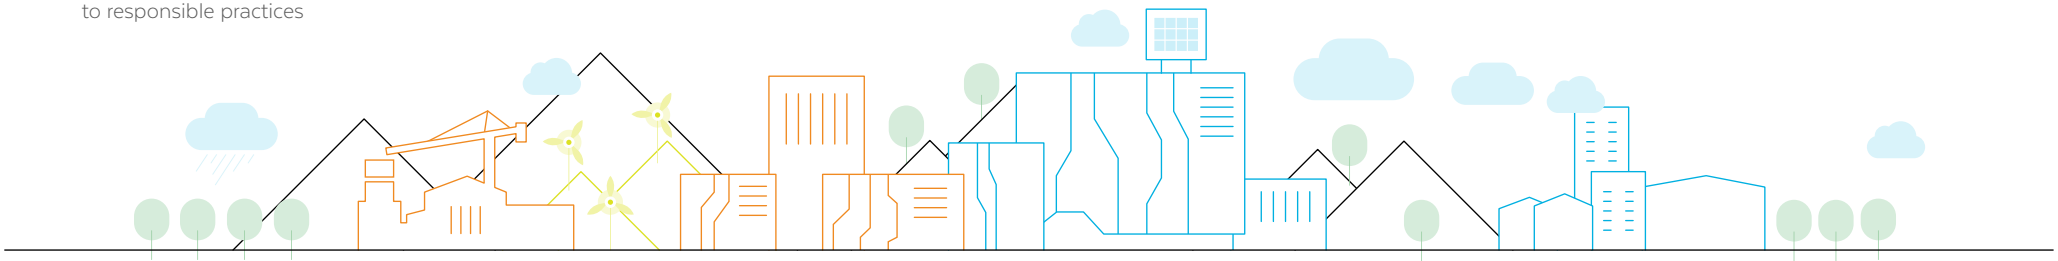

Talent management

Cultivating an exceptional workplace culture that prioritises safety, respect, inclusivity and continuous learning

Our Communities

Giving back

- Community investment initiatives centred on providing youths with the skills to work in the data centre industry, addressing the issue of talent shortage in the industry
- Uplifting the livelihoods of local communities
- Promoting volunteerism opportunities

Safety

Group Minimum Standards established to prioritise health and safety throughout the lifecycle of our business – from governance, due diligence and planning, project and operation set-up to project and operation delivery

Access to green financing

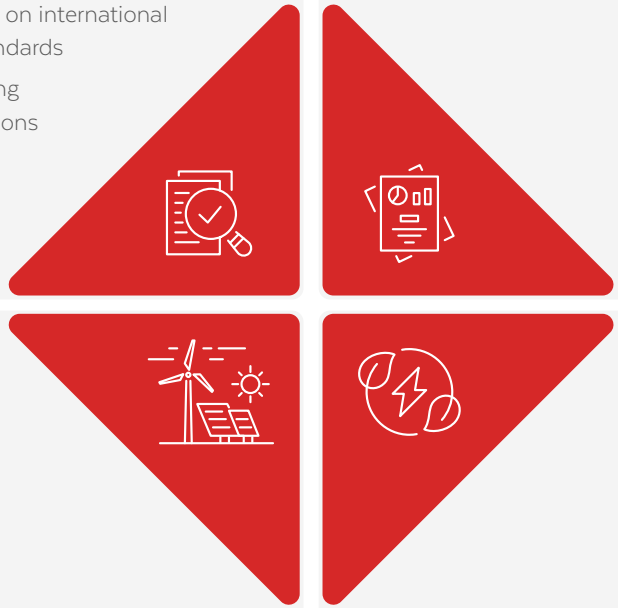

Establishing a Sustainability-linked Financing Framework that ties STT GDC's ESG performance to financing

Embedding ESG in the Entire Lifecycle of Operations

We are committed to driving sustainable growth and creating a responsible digital ecosystem by integrating ESG principles at every stage of our operations.

Site selection

- Prioritise locations with access to renewable energy sources
- Conduct environmental screening on potential sites based on international standards, permit requirements and STT GDC internal standards
- Conduct screening assessment to determine if neighbouring communities will be impacted by construction and operations
- Perform water scarcity and water risk assessments to identify potential vulnerabilities
- Evaluate access to renewable power sources

Design

- Optimise design and layout for energy and water efficiency and effective space utilisation
- Ensure that energy and water performance monitoring and management capabilities are built into the design of data centres
- Designed in line with industry-recognised green building certifications

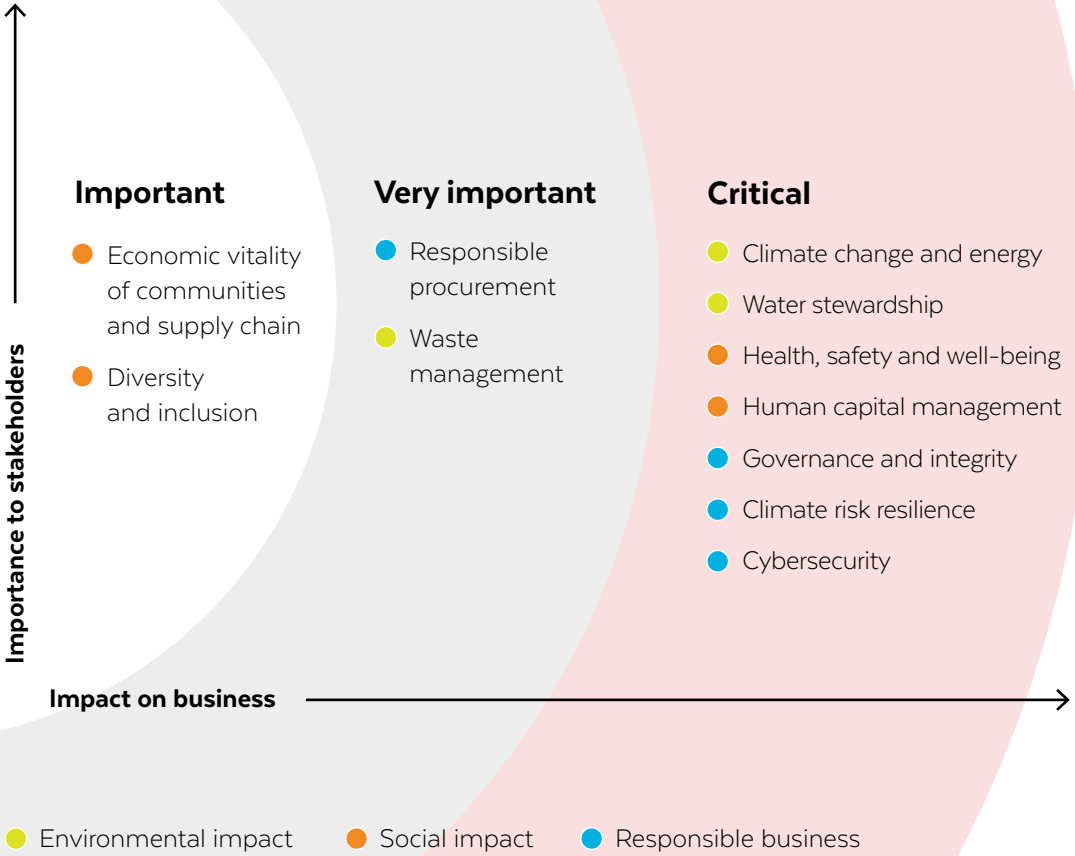

Build

- Prioritise environmentally friendly construction materials and sustainable building practices to minimise embodied carbon
- Invest in energy-efficient HVAC systems and advanced cooling technologies
- Application of latest water optimisation technologies

Operate

- Capture and repurpose waste heat for exporting into industrial heating network where practical
- Minimise potable water usage through rainwater harvesting and recycling of brown water for utilities
- Implement comprehensive monitoring systems to track energy consumption and efficiency
- Regularly analyse performance data to identify and address areas for improvement
- Implement AI for cooling optimisation
- Implement responsible e-waste management practices, including recycling and proper disposal of decommissioned hardware

Figure 3: STT GDC materiality matrix

Materiality Approach

In 2023, we executed an in-depth materiality assessment, leveraging the AA1000 Accountability principles and GRI 2021 Standards to guide our approach. The goal was to identify the most critical ESG issues for our stakeholders, ensuring our sustainability efforts are well-aligned with their expectations.

To gather comprehensive insights, we held detailed interviews with senior leaders from both our group and portfolio companies, as well as investors and financial institutions. These discussions provided valuable perspectives on STT GDC's strategic ESG priorities. Furthermore, we conducted online surveys targeting key stakeholder groups, including employees and key customers, to enrich our understanding and ensure a thorough evaluation.

Our assessment approach encompassed a robust ESG health check, an extensive scan of the reporting and regulatory landscape and benchmarking against our peers. This holistic evaluation allowed us to pinpoint the ESG issues that matter most. The identified material issues were then validated through a meticulous review by STT GDC's senior management and Board of Directors, reinforcing our commitment to integrating ESG considerations into our core business strategies.

Material Topics

Environmental footprint

Decarbonising our operations through energy efficiency, renewable energy and cutting-edge innovation, and ensuring careful management of our water and waste

Material topics	Definition	Stakeholders impacted	Our approach and commitments
Climate change and energy 	Energy management and efficiency in terms of sourcing renewable energy, improvements and consumption are vital to the achievement of the United Nations Sustainable Development Goals (UN SDG) of affordable and clean energy and climate action.	• Customers • Investors • Suppliers • Government and regulators • Industry associations • Joint venture partners	• Pledge to decarbonise operations and achieve carbon neutrality by 2030 • Increase share of carbon-free electricity sources through verified renewable power purchase agreements (PPAs) or reputable Energy Attribute Certificates (EACs) • Utilise carbon intensity as a meaningful metric to understand our decarbonisation efforts and identify new improvement pathways • Track and improve PUE to effectively measure and manage our energy efficiency • Engage partners to bring leading technologies such as liquid cooling in current and future data centre designs • Leverage AI-driven systems and advanced sensors for continuous monitoring, ensuring optimal power efficiency in real-time • Integrate renewable energy and carbon intensity indicators into senior management KPIs
Water 	With water scarcity worsening in many countries, it is pertinent for the data centre industry to manage water usage responsibly and mitigate impact on local water supplies.	• Customers • Investors • Government and regulators	• Track WUE for all data centres and promote water efficiency in data centre front-end design • Utilise non-potable water sources where possible, significantly minimising freshwater use in cooling processes • Implement water efficiency programmes, including on-site water treatment
Waste management 	With global waste projected to grow by 70% by 2050, it is more important than ever to adopt practices that minimise waste.	• Customers • Investors • Government and regulators	• Drive a zero-waste culture by aiming to reduce waste at source • Efficient management of resources and increase use of recycled materials in construction • Build programmes to help support our customers manage their e-waste • Appoint waste collectors to dispose of or recycle our significant material waste streams responsibly

Social progress

Fostering a safe, secure, diverse and inclusive workplace and amplifying positive community impact

Material topics	Definition	Stakeholders impacted	Our approach and commitments
Health, safety and well-being 	The construction and operation of data centres present potential hazards that could pose health and injury risks if safety protocols are neglected.	• Employees • Customers • Investors • Suppliers • Government and regulators	• All our operating entities have implemented an Environment, Health and Safety Management System that is aligned with the stringent requirements of ISO 45001: Occupational Health and Safety standards • Group Minimum Safety Standards established to prioritise health and safety throughout the lifecycle of our products and services • Integrate safety indicators into senior management KPIs • Display a clear commitment to respect all labour and human rights
Diversity and inclusion 	Diverse and inclusive workplaces create a more respectful environment that helps to attract and retain talent, while enhancing capacity for innovation.	• Employees	• Ensure fair treatment and non-discrimination in the workplace • Embed diversity and inclusion principles in our HR processes
Human capital management 	Investing in workforce training and development is critical to enhancing operational efficiency, ultimately ensuring the company's competitiveness.	• Employees • Customers • Investors • Government and regulators	• Foster the growth and capabilities of our workforce by investing in customised training programmes and online learning platforms

Responsible business

Powering a resilient and sustainable digital future through an unwavering commitment to governance and integrity, strengthened cybersecurity, responsible procurement practices and enhancing the economic vitality of the communities we operate in

Material topics	Definition	Stakeholders impacted	Our approach and commitments
Governance and integrity 	High quality corporate governance practices are critical to establishing trust in a company.	• All stakeholders	• Foster a culture of integrity and ethical conduct across the organisation, with employees fully informed of the company's position on anti-bribery, gift giving and corporate entertainment • Comprehensive procurement policies and procedures foster transparency, accountability and ethical decision-making
Economic vitality of communities and supply chain 	During the construction and operation stages, especially in developing countries, data centres can channel economic capital and create jobs for local communities.	• Customers • Suppliers • Government and regulators	• Support local businesses in new markets • Provide opportunities for local communities to join the data centre industry, including training and development programmes
Climate risk resilience 	Climate change impacts on businesses are becoming increasingly tangible, prompting mandatory requirements from regulators for businesses to undertake climate risk assessments.	• Customers • Investors • Suppliers • Government and regulators	• Identify priority climate risks and opportunities by conducting a hotspot analysis aligned with the Intergovernmental Panel on Climate Change (IPCC) climate scenarios

Material topics	Definition	Stakeholders impacted	Our approach and commitments
Responsible procurement 	Globally, responsible procurement is scaling the agenda for data centres. Conflict minerals within supply chains can cause reputational backlash, potentially placing data centres under scrutiny for use of conflict minerals in procured equipment.	• Customers • Suppliers	• Mandate sustainable practices through our Supplier Code of Conduct to ensure an environmentally and socially responsible supply chain • Incorporate ESG criteria in supplier pre-qualification and tender evaluation
Cybersecurity 	Cybersecurity is critical to the protection of data stored within data centres, with breaches having significant reputational and financial impacts.	• Customers	• Enforce groupwide cybersecurity policies covering data protection and retention, access control, information security awareness and training and risk management

Stakeholder Engagement

Engaging with our stakeholders is a fundamental pillar of our sustainability strategy, enabling us to understand and proactively address their concerns. By fostering meaningful, collaborative relationships, we aim to create shared value that benefits all of our stakeholders.

Stakeholder	Engagement platform	Issues and concerns		Our efforts
Employees	• Regular townhalls led by senior management • Staff recreational club • Annual employee engagement survey • ESG roadshows across Group	• Company performance and growth plans • Job security • Remuneration and benefits • Career development and training opportunities	• Labour and human rights • Workplace safety and health • Working environment • Diversity and inclusion	Health, Safety and Well-being Talent Management
Customers	• Annual customer satisfaction survey • Quarterly business reviews • Sustainability surveys	• Availability and resiliency • Customer service and experience • Growth plans	• Data privacy and cybersecurity • Environmental impact • Renewable energy sourcing	Cybersecurity Environmental Footprint Renewable Energy
Investors	• Quarterly reporting • Corporate website and social media platforms • Annual ESG reports	• Corporate governance • ESG performance • Energy efficiency	• Renewable energy sourcing • Green building and energy efficiency certification	Environmental Footprint Responsible Business Green Buildings
Suppliers	• Procurement activities • Supplier code of conduct • Scheduled performance reviews	• Legal compliance • Quality and design • Workers' safety, health and well-being	• Labour and human rights • Resource and waste management • Responsible procurement	Health, Safety and Well-being Responsible Procurement
Industry associations	• Membership and participation in trade associations and working groups • Sustainability-related consultations and dialogues	• Data security and privacy compliance • Environmental impact Energy efficiency • Community engagement		Cybersecurity Environmental Footprint Energy Efficiency
Government and regulators	• Senior management representation on boards of industry bodies • Regular dialogue related to project permitting and other business matters	• Data security and privacy compliance • Legal compliance • Energy efficiency • Renewable energy		Cybersecurity Energy Efficiency Renewable Energy
Joint venture (JV) partners	• Engagement on investment matters and management of JV	• Company performance and growth plans • Data security and privacy compliance	• Legal compliance	Cybersecurity Environmental Footprint

Decarbonisation

Renewable Energy

Energy Efficiency

Water Stewardship

Waste Management

Striving towards a sustainable digital future, we are decarbonising our operations through energy efficiency, renewable energy and cutting-edge innovation and ensuring careful management of our water and waste.

As of 2024, we are exceeding our projected trajectory for all our environmental goals, demonstrating significant progress and a firm commitment to minimising our environmental impact.

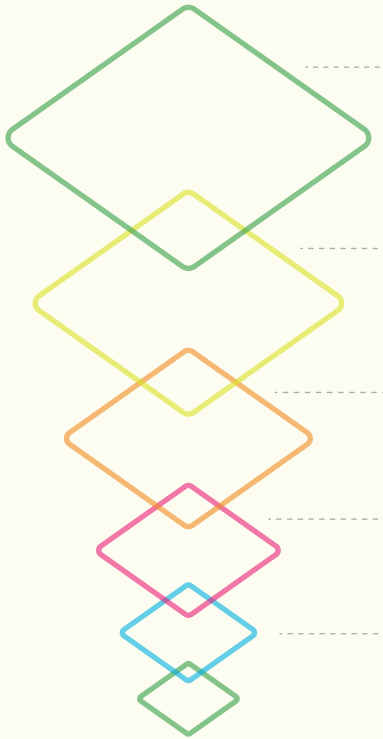

Goal	2024 Performance
Carbon neutral data centre operations by 2030	**22.9%** year-on-year reduction
85% renewable energy by 2028	**78.5%** renewable energy
70% reduction in carbon intensity from 2021 baseline by 2028	**66.2%** reduction in carbon intensity
10% improvement in PUE by 2025 from 2020 baseline	**11.2%** improvement in PUE from 2020 baseline
65% of data centres to be green building certified by 2028	**51.3%** green building certified data centres

Decarbonisation

At STT GDC, we are committed to doing our part to fight climate change. Our goal of achieving carbon neutrality by 2030 is both ambitious and essential. Reaching this milestone demands bold action and innovation at scale—embracing cutting-edge technologies, accelerating the deployment of renewable energy and fostering strong partnerships.

Our decarbonisation strategy is grounded in the mitigation hierarchy, focusing on minimising environmental impact based on prioritised approach through avoidance, reduction then replacement. This comprehensive approach ensures that we are well-positioned to meet future computing needs as demand for data continues to grow, all while minimising environmental impact and reinforcing our commitment to a sustainable and low-carbon future.

Figure 4: Mitigation hierarchy

High energy efficiency
Highly efficient specialised data centre power and cooling systems

Control, metering and monitoring
IoT-driven intelligent building platform, sub-metering, regular energy audits

On-site (behind the meter) renewables
Private wire PPAs, solar PVs, exploring new innovations such as hydrogen solutions and micro-wind turbines

Green power procurement
Solar/wind/hydro Power Purchase Agreements (PPAs)

Energy attribute certificates
e.g. Renewable Energy Certificates (RECs)/Renewable Energy Guarantees of Origin (REGOs)

Carbon offsets
Last-mile option to address any residual hard-to-abate carbon, especially for Scope 1 and 3

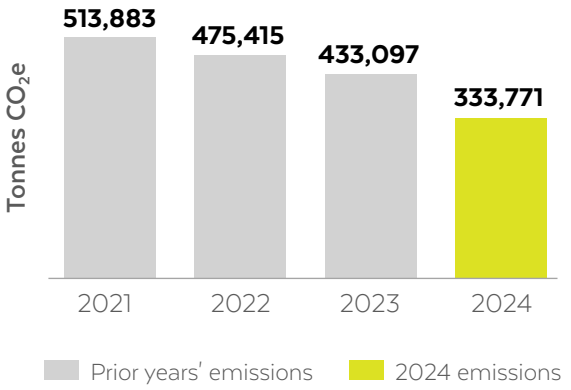

Reducing our carbon footprint

In 2024, we saw a 22.9% year-on-year reduction in our carbon footprint. The 2024 achievement reflects a combination of our renewable energy purchasing and energy efficiency initiatives.

Having already outperformed the key performance indicators set out in our 2022 Sustainability-Linked Financing Framework, we announced the launch of an enhanced framework in September 2024. Under the new framework, we have set ourselves more ambitious goals, including increasing the use of renewable energy to 85% by 2028 and achieving a 70% reduction in carbon intensity from a 2021 baseline by 2028.

We prioritise carbon reductions by implementing energy efficiency measures, increasing our use of renewable energy and exploring innovative technologies. For emissions that cannot be mitigated with existing solutions, we invest in high-quality carbon offset projects to ensure meaningful impact.

Figure 5: Scope 1 and 2 emissions

Scope 1 and 2 emissions

22.9% reduction from 2023

Goal: Carbon neutral by 2030

GHG emissions inventory

Our reported GHG emissions comprise Scope 1 emissions from diesel consumption for our backup generators and refrigerants, as well as Scope 2 emissions from purchased electricity.

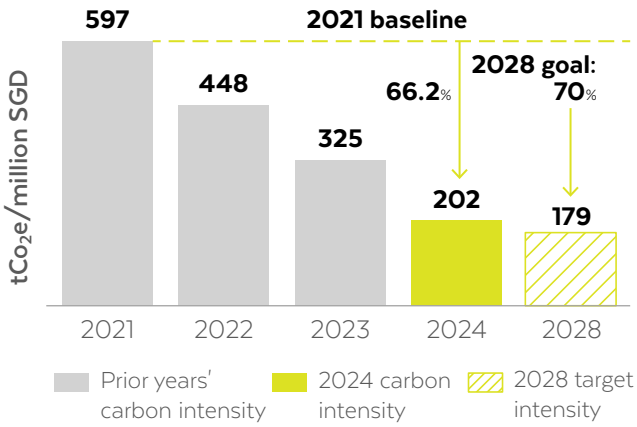

In 2024, we began the process of aligning our emissions reporting boundaries with that of our customers to avoid double counting of emissions in colocation data centres. Recognising the lack of standards or guidelines accounting for customer electricity emissions in colocation data centres, we have adopted the following position: where customers have positively confirmed that they account for their emissions from our data centres within their own Scope 2 inventories, we remove these emissions from STT GDC's Scope 2 inventory and report them under our Scope 3 inventory.

Carbon intensity

In 2024, we achieved a 66.2% reduction in carbon intensity from our 2021 baseline by 2024.

We use carbon intensity as a key metric to assess the carbon footprint of our operations in relation to impact. As we continue to expand, we anticipate a significant rise in absolute emissions. Measuring and reporting carbon intensity along with our absolute GHG emissions allows us to monitor our carbon impact more holistically, taking into consideration of our growth.

Figure 6: Carbon intensity

Carbon intensity

66.2% reduction

Goal: 70% reduction within data centre operations by 2028 against 2021 baseline

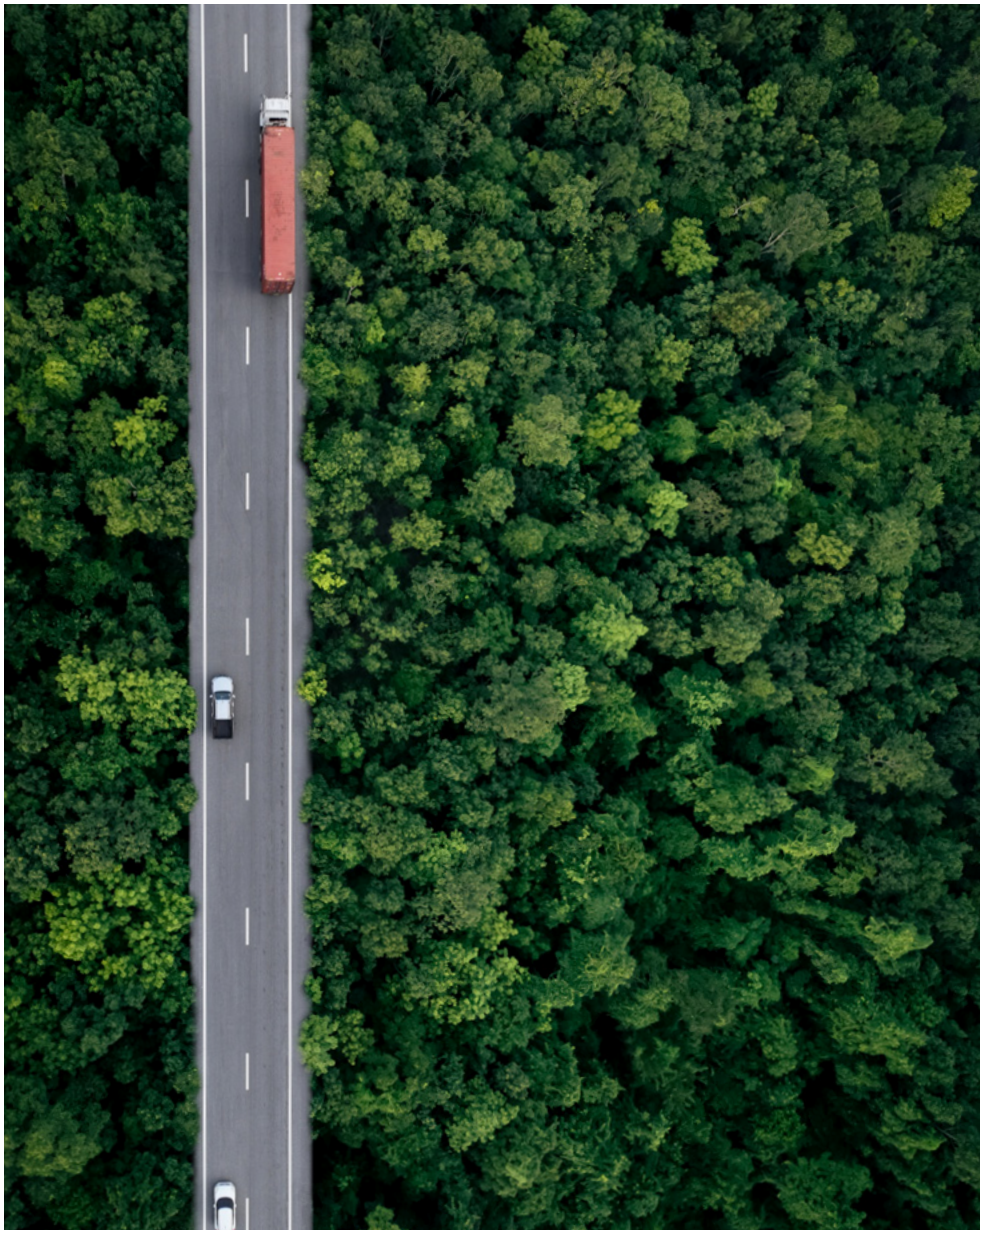

Singapore

Transitioning to HVO for backup generators

In 2024, we became the first data centre operator in Singapore to deploy hydrotreated vegetable oil (HVO) for use in our backup generators across our facilities in Singapore. Our initial deployment of 50,000 litres, which has the potential to avoid over 150,000 metric tonnes of CO_2e, marks the beginning of a broader shift towards cleaner energy alternative across our facilities.

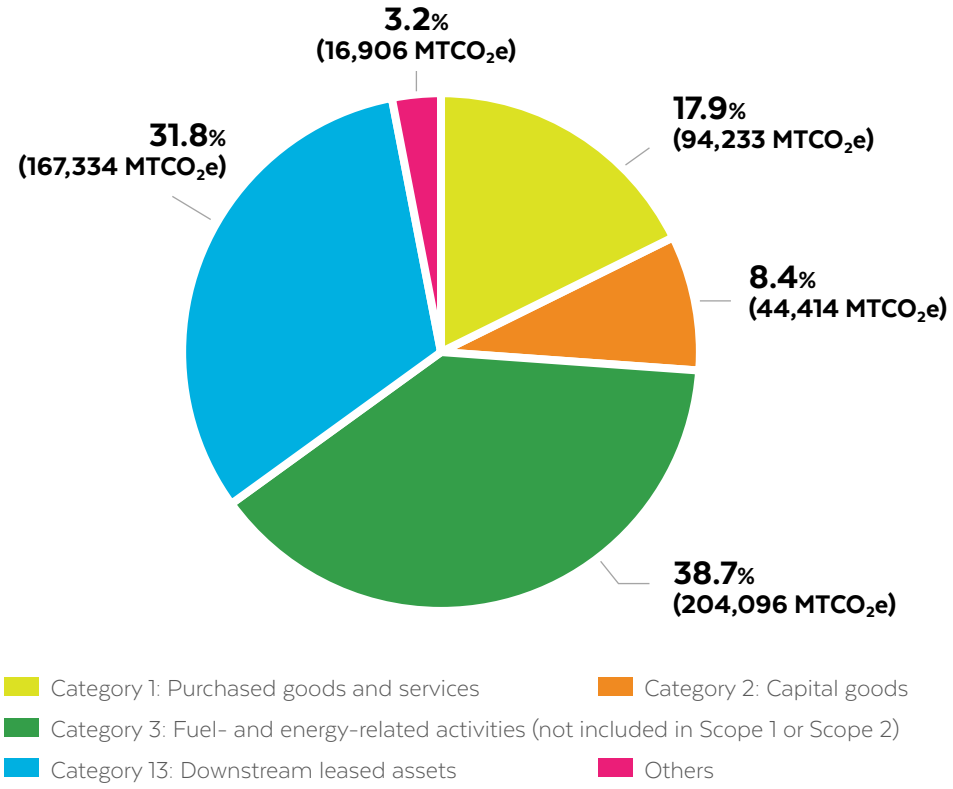

HVO is a renewable diesel alternative produced from waste fats and vegetable oils. As a drop-in fuel, it is compatible with most existing diesel engines without modification. By using HVO, we significantly reduce greenhouse gas (GHG) emissions from generator testing and operations, making it a cleaner, more sustainable option for backup power generation.

Refining Scope 3 emissions data

Despite the complexity and indirect nature of Scope 3 emissions, we are committed to enhancing transparency and refining the accuracy of our data. In 2023, we began calculating our total Scope 3 emissions for business travel (including hotel stays) and employee commuting. We have made further progress in 2024, enhancing transparency around more categories:

As we gather more information about our Scope 3 data, we will be better positioned to identify improvements in data quality and hotspots for supply chain emissions reductions.

Renewable Energy

We are on track towards meeting our updated target to achieve 85% renewable energy by 2028, with renewable energy accounting for 78.5% of our electricity consumption in 2024.

As we expand our business to meet the increasing demand for data storage, we remain committed to increasing our sourcing of renewable energy. Having surpassed our 2026 goal of reaching 60% renewable energy in 2024, we made a deliberate decision to set a new, more ambitious goal in 2024 to achieve 85% renewable energy by 2028, reflecting our commitment to accelerating our sustainability efforts and furthering our transition to clean energy.

In our pursuit of achieving carbon neutrality by 2030, STT GDC has made clean and renewable energy a top priority across our global portfolio. We are actively advancing our renewable energy coverage through strategic investments, including Power Purchase Agreements (PPAs), green tariffs and the procurement of Energy Attribute Certificates (EACs) and offsets. We have developed internal standards for renewable energy procurement and are standardising the approach across our markets.

In 2024, we consumed 2,386GWh of electricity — a 19.4% increase from 2023. Of this total, 78.5% was sourced from renewable energy. This percentage includes customers who have positively confirmed that they are purchasing renewable energy to offset their emissions within our data centres.

Figure 7: Gross electricity consumption

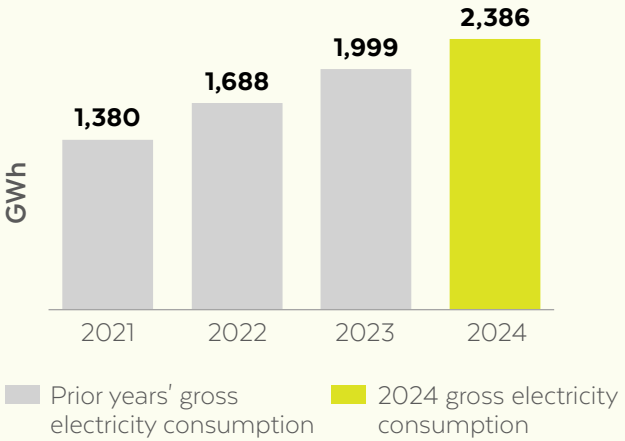

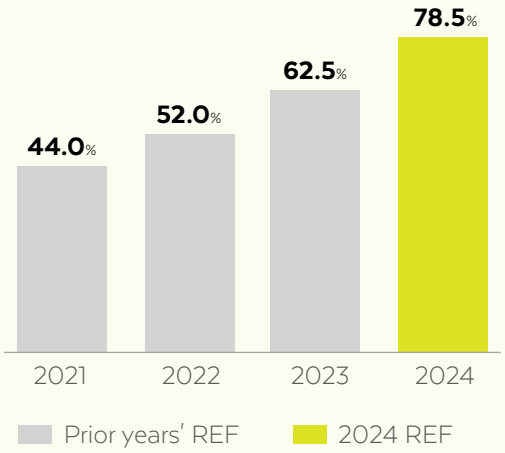

Figure 8: Renewable energy factor (REF)

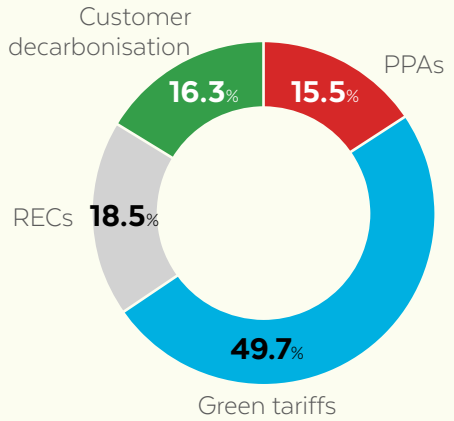

Renewable energy factor

78.5%

Goal: 85% by 2028

Figure 9: Renewables breakdown

Establishing rigorous standards in renewable energy sourcing

STT GDC is steadfast in its commitment to achieving carbon neutrality through rigorous renewable energy procurement practices. To ensure consistency and alignment across all our markets, we have established comprehensive internal standards that guide the procurement of renewable energy.

Our framework prioritises on-site and private wire renewables, followed by PPAs, green retail solutions and EACs, in that order. The selection process is guided by a careful evaluation of availability, credibility and cost-effectiveness, tailored to the specifics of each market.

The following criteria is taken into consideration in our procurement of EACs:

- Sourced in compliance with credible international or local standards
- Originate from regions close to our operational areas
- Linked to reliable renewable energy technologies
- Traceability

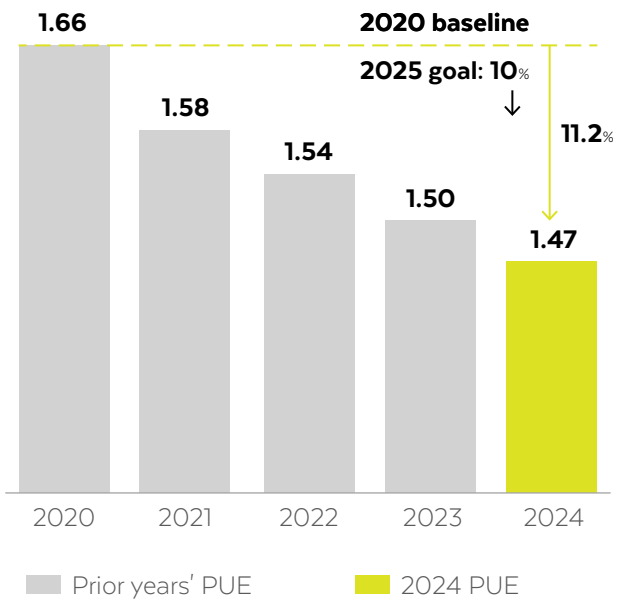

Energy Efficiency

Power Usage Effectiveness (PUE) is a critical efficiency metric for our data centres. In 2024, we achieved an operating PUE of 1.47, a 11.2% improvement from our 2020 baseline — exceeding our 2025 target of 10%.

We closely track and benchmark the PUE of all our facilities, using it to monitor power consumption trends and evaluate the impact of design and operational choices on each facility's performance over time. For new sites, we proactively make design decisions aimed at meeting ambitious PUE targets.

We are continually exploring innovative solutions, including hardware and software optimisation, advanced cooling management and state-of-the-art monitoring systems, to further enhance the energy efficiency of our data centres. Our new facilities are equipped with comprehensive energy management systems that provide precise monitoring and measurement of power consumption, allowing us to identify and capitalise on opportunities for energy reduction and operational efficiency.

Figure 10: Power usage effectiveness

PUE

11.2% reduction

Goal: 10% reduction by 2025 against 2020 baseline

Optimising energy performance

In our ongoing commitment to sustainability, we have upgraded the lighting systems in our data centres in Singapore by replacing T5 fluorescent lights with energy-efficient LED lights. This transition has led to a significant reduction in lighting energy consumption of close to 19% over in one of our facilities.

At our SIN 6 facility, we implemented operational changes to reduce energy consumption. Fan coil units serving the fire-fighting lobby, corridors and loading bays are now turned off during weekends, resulting in a substantial reduction of over 25,000 kWh per month from the baseline.

We also actively encourage our clients to install blanking panels in their data halls. Used to fill empty spots in server racks to separate hot and cold air zones, these panels improve airflow management within server racks and data centres, contributing to better cooling efficiency.

In India, we successfully installed dual-fuel systems at two of our data centres. These systems are capable of running on either diesel or natural gas, enabling us to use a lower carbon fuel for our operations.

To unify our global operations, we established an energy and water efficiency committee across the group in 2024 to share best practices and adopt a holistic review of water and energy efficiency across all our systems. Comprising experts from various functions and geographies, the committee monitors performance metrics based on long-term operational data trends.

Optimising data centre cooling and operations with AI

In 2024, STT GDC announced our collaboration with Phaidra to become the first data centre operator in Asia to pilot its AI-powered control systems for optimising data centre cooling. This initiative sets a new industry benchmark by testing AI-driven optimisation in a hybrid cooling environment — a more challenging setting compared to traditional air-cooled data centres.

Building on existing control systems, these AI agents aid facility operations by analysing thousands of real-time sensor trends to enhance energy efficiency, reliability and cooling performance through specialised deep learning models. This closed-loop system allows the AI agents to continuously learn and adapt to varying conditions, such as changes in load due to higher density GPU deployments or external weather shifts. Based on current parameters, an initial estimate of 10% cooling energy savings is expected, with potential savings increasing to as high as 30% as the AI model receives more operational data.

This innovative initiative highlights STT GDC's dedication to cutting-edge and sustainable data centre management. The flagship pilot in Singapore serves as a model for potential future deployments across our portfolio, essential for efficiently and sustainably managing heat from high-performance computing required for accelerated workloads like AI and beyond.

Water Stewardship

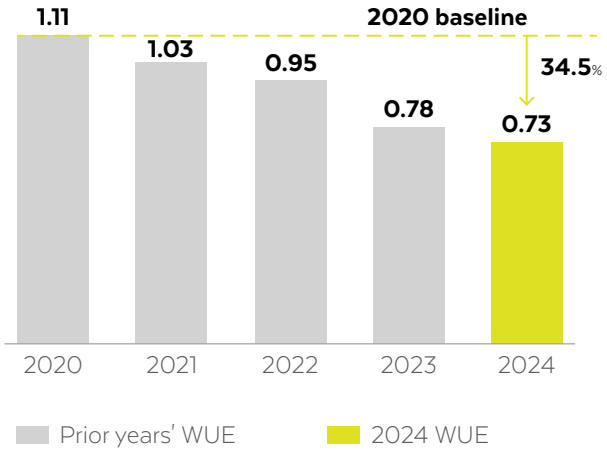

We track the water usage effectiveness (WUE) of all the data centres within our portfolio. In 2024, we achieved a 34.5% improvement from a 2020 baseline, demonstrating our ongoing commitment to enhancing water efficiency in our operations.

This progress is the result of our ongoing commitment to water management, including our preference for air-cooled chiller plants at new data centres in water-scarce regions. Given the increasing pressure on global water resources, we recognise the critical importance of responsible water management across our business. To ensure that our facilities are situated in locations where water resources are sustainable, water risk and water scarcity are integrated into our site selection criteria.

While energy consumption remains our primary environmental focus, we are also mindful of the need to balance both energy and water usage in cooling our data centres.

To safeguard local water ecosystems, we prioritise sourcing non-potable water where possible. For example, our data centres in Singapore use NEWater, a high-grade recycled water, in their operations.

Figure 11: Water usage effectiveness

WUE

34.5%

improvement in WUE from 2020 baseline

India

Enhancing water efficiency in HVAC operations

To optimise water efficiency, we have implemented key improvements in our HVAC water-cooled chiller systems at selected sites in India.

At Chennai DC2, integration of piping systems of water-cooled and air-cooled chillers led to reduced reliance on water-cooled chillers, leading to a substantial reduction in water withdrawn.

At Pune DC1, we embarked on multiple projects to reduce water consumption, including adjusting the conductivity set point and Cycles of Concentration as well as optimising the use of high Total Dissolved Solids (TDS) water, allowing for the same water to be reused more before having to be replaced. The combination of these efforts has led to an overall reduction in water withdrawn, including overflow and blowdown losses, and others.

Waste Management

At STT GDC, we are committed to fostering a culture of circularity. Addressing the waste generated at our data centres is a part of our sustainability management framework, with electronic waste representing the majority of our waste stream.

Our waste management strategy focuses on a hierarchy of actions: prioritising waste reduction, followed by reuse, recycling, recovery, and, as a last resort, responsible disposal. We collaborate closely with third-party vendors to track, manage and analyse our waste streams, providing us with valuable insights that allow us to continuously refine and enhance our waste management processes.

Social Progress

Health, Safety and Well-being

Talent Management

Community Development

Fostering a safe, secure, diverse and inclusive workplace and amplifying positive community impact as we look towards a sustainable digital future.

2024 Performance

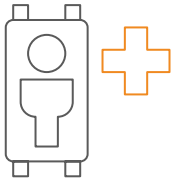

0.1
Total Recordable Incident Rate

22.7%
women representation across the group

0
fatalities and serious injuries

>2,000
lives positively impacted through community service since 2018

Health, Safety and Well-being

In 2024, we achieved a Total Recordable Incident Rate (TRIR) of 0.1, well below our target of 0.5.

Our commitment to safety is exemplified by our track record of zero work-related fatalities or serious injuries across the group since 2020. All our operating entities have implemented an Environment, Health and Safety (EHS) management system that is aligned with the rigorous standards of ISO 45001: Occupational Health and Safety. This system forms the foundation of our risk management strategy, enabling us to proactively identify and seize opportunities to meet and exceed our health and safety objectives, fostering a culture of safety at all levels.

In 2024, we launched a digital platform to streamline the collection and monitoring of health and safety data across our global operations. This platform allows for tracking of safety performance, enhances transparency and enables quicker identification of risks and corrective actions. It also helps to centralise incident reporting, ensuring consistent and timely responses, while offering detailed insights into trends that help us continually refine our safety processes.

To further strengthen our health, safety and well-being governance, we have established dedicated health and safety functions in key markets staffed with qualified health and safety professionals, ensuring local expertise and compliance with country-specific regulations. These in-country teams play a crucial role in embedding safety best practices within daily operations, conducting risk assessments and providing hands-on guidance to employees and contractors.

We prioritise equipping our employees with the knowledge and skills to maintain a safe work environment. In 2024, four new health and safety training modules were introduced on STT GDC's e-learning platform, covering key topics such as health and safety policies, hazard communication, chemical management, permit to work and confined space management.

Beyond physical health and safety, we are deeply committed to supporting the mental and social well-being of our employees, acknowledging that addressing mental health challenges is a critical component of a comprehensive workplace health strategy.

Our health, safety and well-being strategy is driven by a four-pronged approach:

Process improvement

Adopting a standardised process-based approach towards embedding health and safety standards in operational workflows such as procurement practices, while ensuring compliance via comprehensive audits.

Active learning

Instilling greater trust and empowerment through awareness, upskilling and competency training to embed integrity and rigour.

Knowledge sharing

Building platforms and internal and external collaboration networks to promote safe methods, lessons learned and best practices.

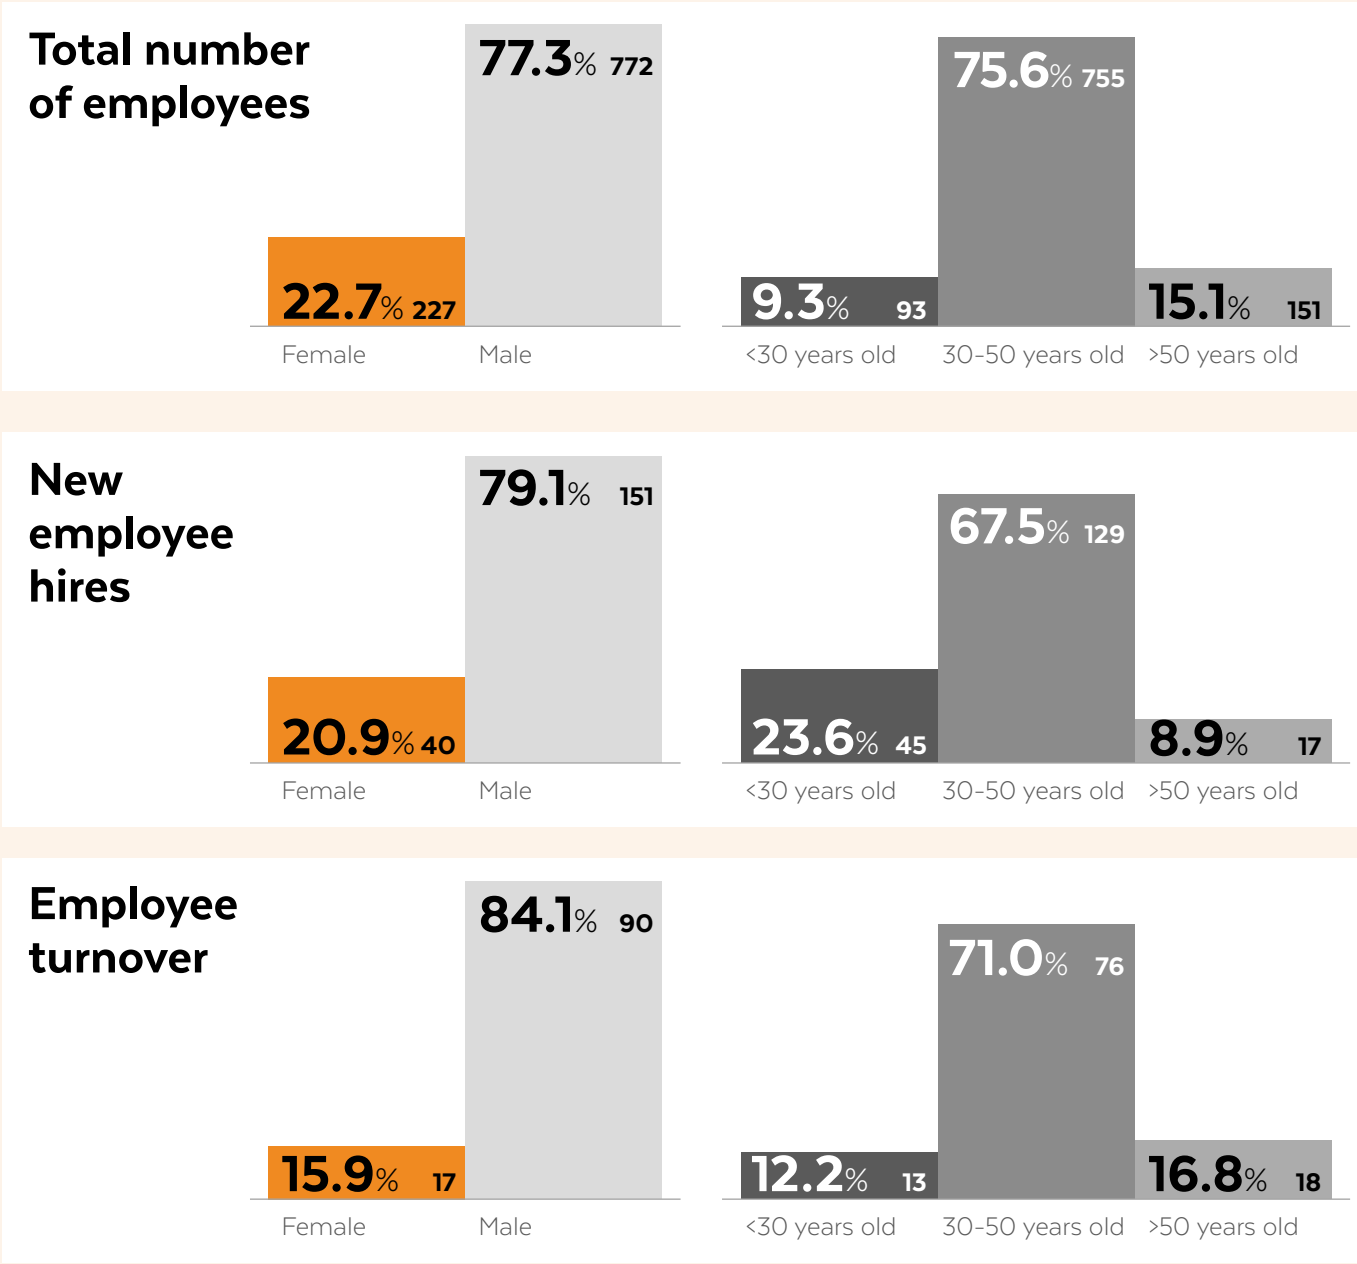

Health and wellbeing

Actively caring for people's physical and mental well-being to ensure employees feel valued and respected.

Talent Management

Our success is built on a foundation of diversity, inclusion and a culture of growth. We understand that a skilled and engaged workforce is essential, especially as our industry continues to evolve at a rapid pace.

We believe that the key to managing our human capital lies in fair and equitable employment practices, fostering a workplace where every individual can thrive. By investing in continuous learning, professional development, we empower our employees to reach their full potential—fuelling both their success and the long-term growth of our business.

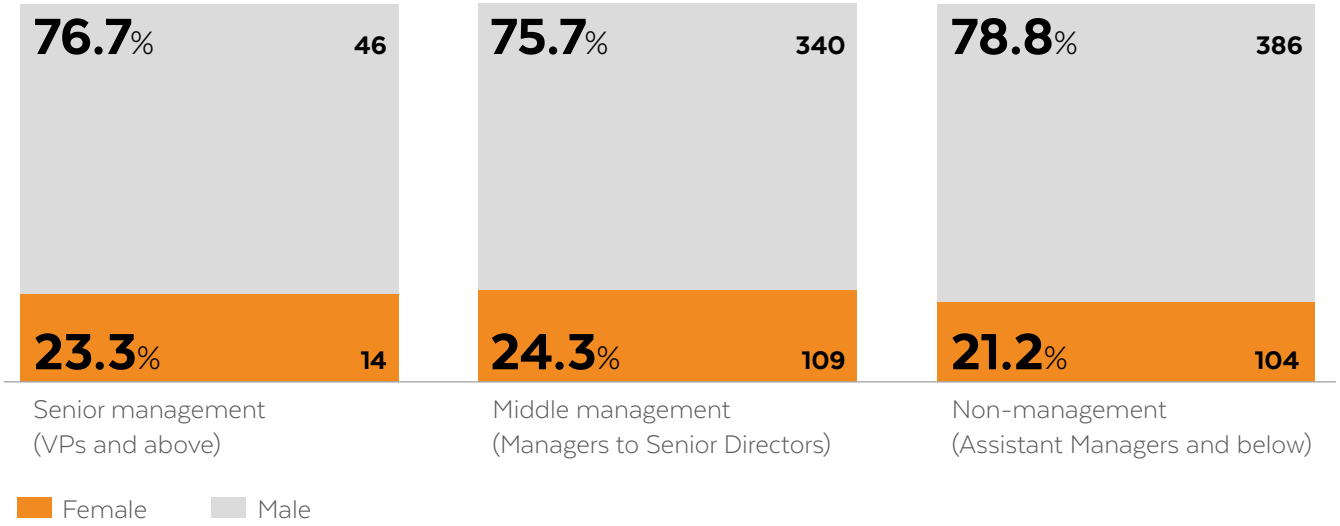

Championing diversity, equity and inclusion in the workplace

At STT GDC, we are dedicated to fostering a workplace where everyone is valued, respected and empowered to succeed. We are committed to providing equal opportunities and fair treatment to all employees and candidates, ensuring that diversity and inclusion are embedded in every aspect of our operations.

Our commitment extends beyond policies—it is reflected in our recruitment and performance appraisal processes, which are designed to be unbiased and merit-based. These principles are further reinforced through our Employee Code of Conduct, which upholds the highest standards of human rights, fairness and anti-discrimination, creating an inclusive environment where all individuals can thrive.

By designation

Singapore

Building a supportive and inclusive workplace

In celebration of International Women's Day, we hosted an insightful lunchtime panel discussion featuring two distinguished industry leaders: Jennie Tan (Managing Director, Acme Associates Pte Ltd) and Peishan Tian (Executive Director, Culture and Employee Experience APAC, Landor) and our Group Chief Operating Officer, Thomas Ee. Moderated by Thomas, the discussion delved into key strategies for advancing inclusivity and diversity in the workplace.

The panel explored the crucial role of leadership in shaping an inclusive culture, from equitable hiring practices and fair recognition to encouraging diverse participation in innovation and decision-making. Thought-provoking conversations underscored the importance of amplifying different perspectives and creating an open, supportive environment where every voice is valued. The event concluded with a reflective activity, where participants committed to tangible actions for driving inclusivity within their teams and spheres of influence.

Continuing this theme of support and community, colleagues in Singapore had the unique opportunity to welcome their loved ones to our flagship Defu data centre campus at our inaugural Family Day. This special event offered an exclusive behind-the-scenes look at our operations through guided tours and engaging activities. Families gained firsthand insight into the vital role our data centres play in the digital economy, fostering a deeper appreciation for the work of their loved ones.

Providing competitive compensation and benefits

Full-time employees enjoy competitive compensation and comprehensive benefits that include life insurance, healthcare benefits, annual, medical, marriage and compassionate leave entitlements, as well as welfare entitlements.

Singapore

Supporting employee well-being

Beyond offering competitive compensation and benefits, we are committed to fostering a workplace where employees can thrive both professionally and personally. We provide a range of unique perks designed to support well-being, encourage work-life balance and create a positive, engaging environment.

Our Health and Fitness Recreation Club (REC Club) plays a vital role in promoting an active lifestyle amongst our employees, organising over 10 activities in 2024, including futsal, badminton, yoga, bowling and running. These activities provide opportunities for employees to stay fit, connect with colleagues and recharge outside of work.

Recognising the importance of flexibility, we offer adaptable work arrangements that allow employees to work remotely when needed. Open communication with managers ensures that these arrangements support both personal well-being and business needs.

Further strengthening our commitment to social responsibility, we introduced two days of volunteering leave in 2024, empowering employees to contribute to meaningful causes and give back to their communities. This initiative reflects our belief that a fulfilling career extends beyond the workplace, allowing employees to make a positive impact while balancing their personal and professional commitments.

Aligning employee goals with business objectives

STT GDC uses the Performance Management Process to effectively manage and monitor employees' performance against goals aligned with the company's overarching business objectives. The process ensures continuous feedback throughout the performance year, culminating in an annual review of KPIs using a balanced scorecard approach.

In 2024, we took a significant step towards a more comprehensive approach to employee evaluation by integrating Core Values, Critical Skills and Leadership Behaviours into our Performance Management Framework. This integration ensures that our employees are assessed not only on their technical expertise and performance but also on their alignment with the company's values, their proficiency in key skills and their leadership potential.

Our Core Values serve as the foundation for our actions, promoting a culture rooted in integrity, accountability and respect. By aligning performance management with these values, we cultivate a cohesive and purpose-driven environment where all employees are motivated to contribute to the greater good of the organisation.

Incorporating critical skills and leadership behaviours into our framework helps to inspire and empower our workforce. This focus on leadership development strengthens our talent pool, ensuring that we remain agile and resilient in the face of both challenges and emerging opportunities.

Fuelling growth through continuous training and development

We understand that the key to staying competitive in an ever-changing industry is investing in the growth and development of our workforce. By equipping our employees with the latest skills and knowledge, we ensure they remain at the forefront of industry advancements and emerging technological trends.

Our commitment to training and development goes beyond simply keeping pace with change. We dedicate significant resources to continually enhance our human capital, empowering employees to unlock their full potential. This ongoing investment not only strengthens individual capabilities but also boosts our collective competitiveness, positioning us for long-term success in an increasingly dynamic landscape.

Training hours

23,503 training hours

23.5 average training hours per employee

Singapore

Driving continuous learning and innovation

In 2024, we hosted our inaugural Learning Festival in our Singapore office, centred around growth, innovation and collaboration. The event offered a dynamic platform for knowledge-sharing, featuring insightful presentations and a thought-provoking panel discussion on critical topics such as green energy sourcing, the impact of AI-driven power demands on the energy landscape and the future of data centre design.

Booths provided an interactive learning experience, allowing teams to explore innovations in environmental management, health and safety and even experiment with cutting-edge AI tools. These engaging sessions were designed to inspire creative thinking and foster cross-functional collaboration.

Building on the success of our EdApp Mobile Learning Management System, we have expanded this initiative to new regions, including Japan and Indonesia. With over 200 courses available, the platform empowers employees to enhance their technical, core and leadership skills, ensuring continuous growth.

Furthermore, we have broadened our online learning offerings through LinkedIn Learning, providing employees access to a wealth of courses spanning various industries and subjects. In 2024 alone, more than 86 employees completed approximately 108 hours of microlearning, reinforcing our commitment to ongoing skill development and knowledge expansion. Through these diverse learning channels, we equip our teams to adapt to the ever-evolving business landscape.

Community Development

At STT GDC, we are dedicated to making a meaningful impact in the communities where we operate. Our commitment goes beyond business—through strategic partnerships and employee-driven initiatives, we aim to foster stronger, more resilient communities. By working together with local organisations and empowering our employees to contribute, we strive to leave a lasting, positive legacy that benefits generations to come.

India

Advancing sustainable livelihoods in rural communities

STT GDC India has established two impactful projects in Gujarat, focusing on improving the livelihoods of rural and tribal farmers in underserved communities. The Lakhpati Kisan initiative, a collaboration with Tata Trusts and NM Sadguru Foundation, aims to uplift smallholder and marginal farmers by empowering women-led community institutions. By providing high-quality agricultural inputs, implementing water resource management systems and promoting income diversification through higher-value crops and livestock, the project has already shown promising results, with farmer household incomes expected to increase from USD$300 to USD$500 to USD$1,800 to USD$2,000 annually over three to four years. Additionally, the project focuses on long-term sustainability by enhancing agricultural practices, establishing market linkages and creating lasting social impact through community-owned infrastructure like solar irrigation systems and precision farming techniques. Over 1,700 farmer households have benefited from this initiative since the programme's inception in 2018.

In the Dahod district, the Sustainable Livelihoods Through Renewable Energy project addresses the energy and water access challenges faced by tribal farmers. This initiative focuses on providing solar-powered solutions, including mini lift irrigation systems, bio-digesters, hydroponics and solar-powered milking machines. By introducing these renewable energy technologies, the project is improving crop productivity, promoting better animal husbandry practices and ensuring access to clean water, all while lowering energy costs. Launched in 2024, the programme is set to benefit approximately 400 farmers, with an estimated total financial benefit of over USD$800,0000 over seven years.

Through these projects, STT GDC India is not only enhancing the livelihoods of marginalised communities but also contributing to the greater goal of building sustainable and resilient rural economies.

Singapore

Exploring nature and heritage with Boys Town youths

STT GDC collaborated with Boys Town to organise a memorable outing to Pulau Ubin for a group of 20 youths aged between 7 and 16. The youths got the opportunity to explore the small island northeast of Singapore through a range of activities that highlighted the island's natural heritage and local childhood games of the past.

This initiative aimed to blend education with enjoyment, offering the students a chance to learn about nature and local history in an interactive and fun environment. At the same time, it provided our employees with the opportunity to connect with the community, creating memories for both the young participants and our team.

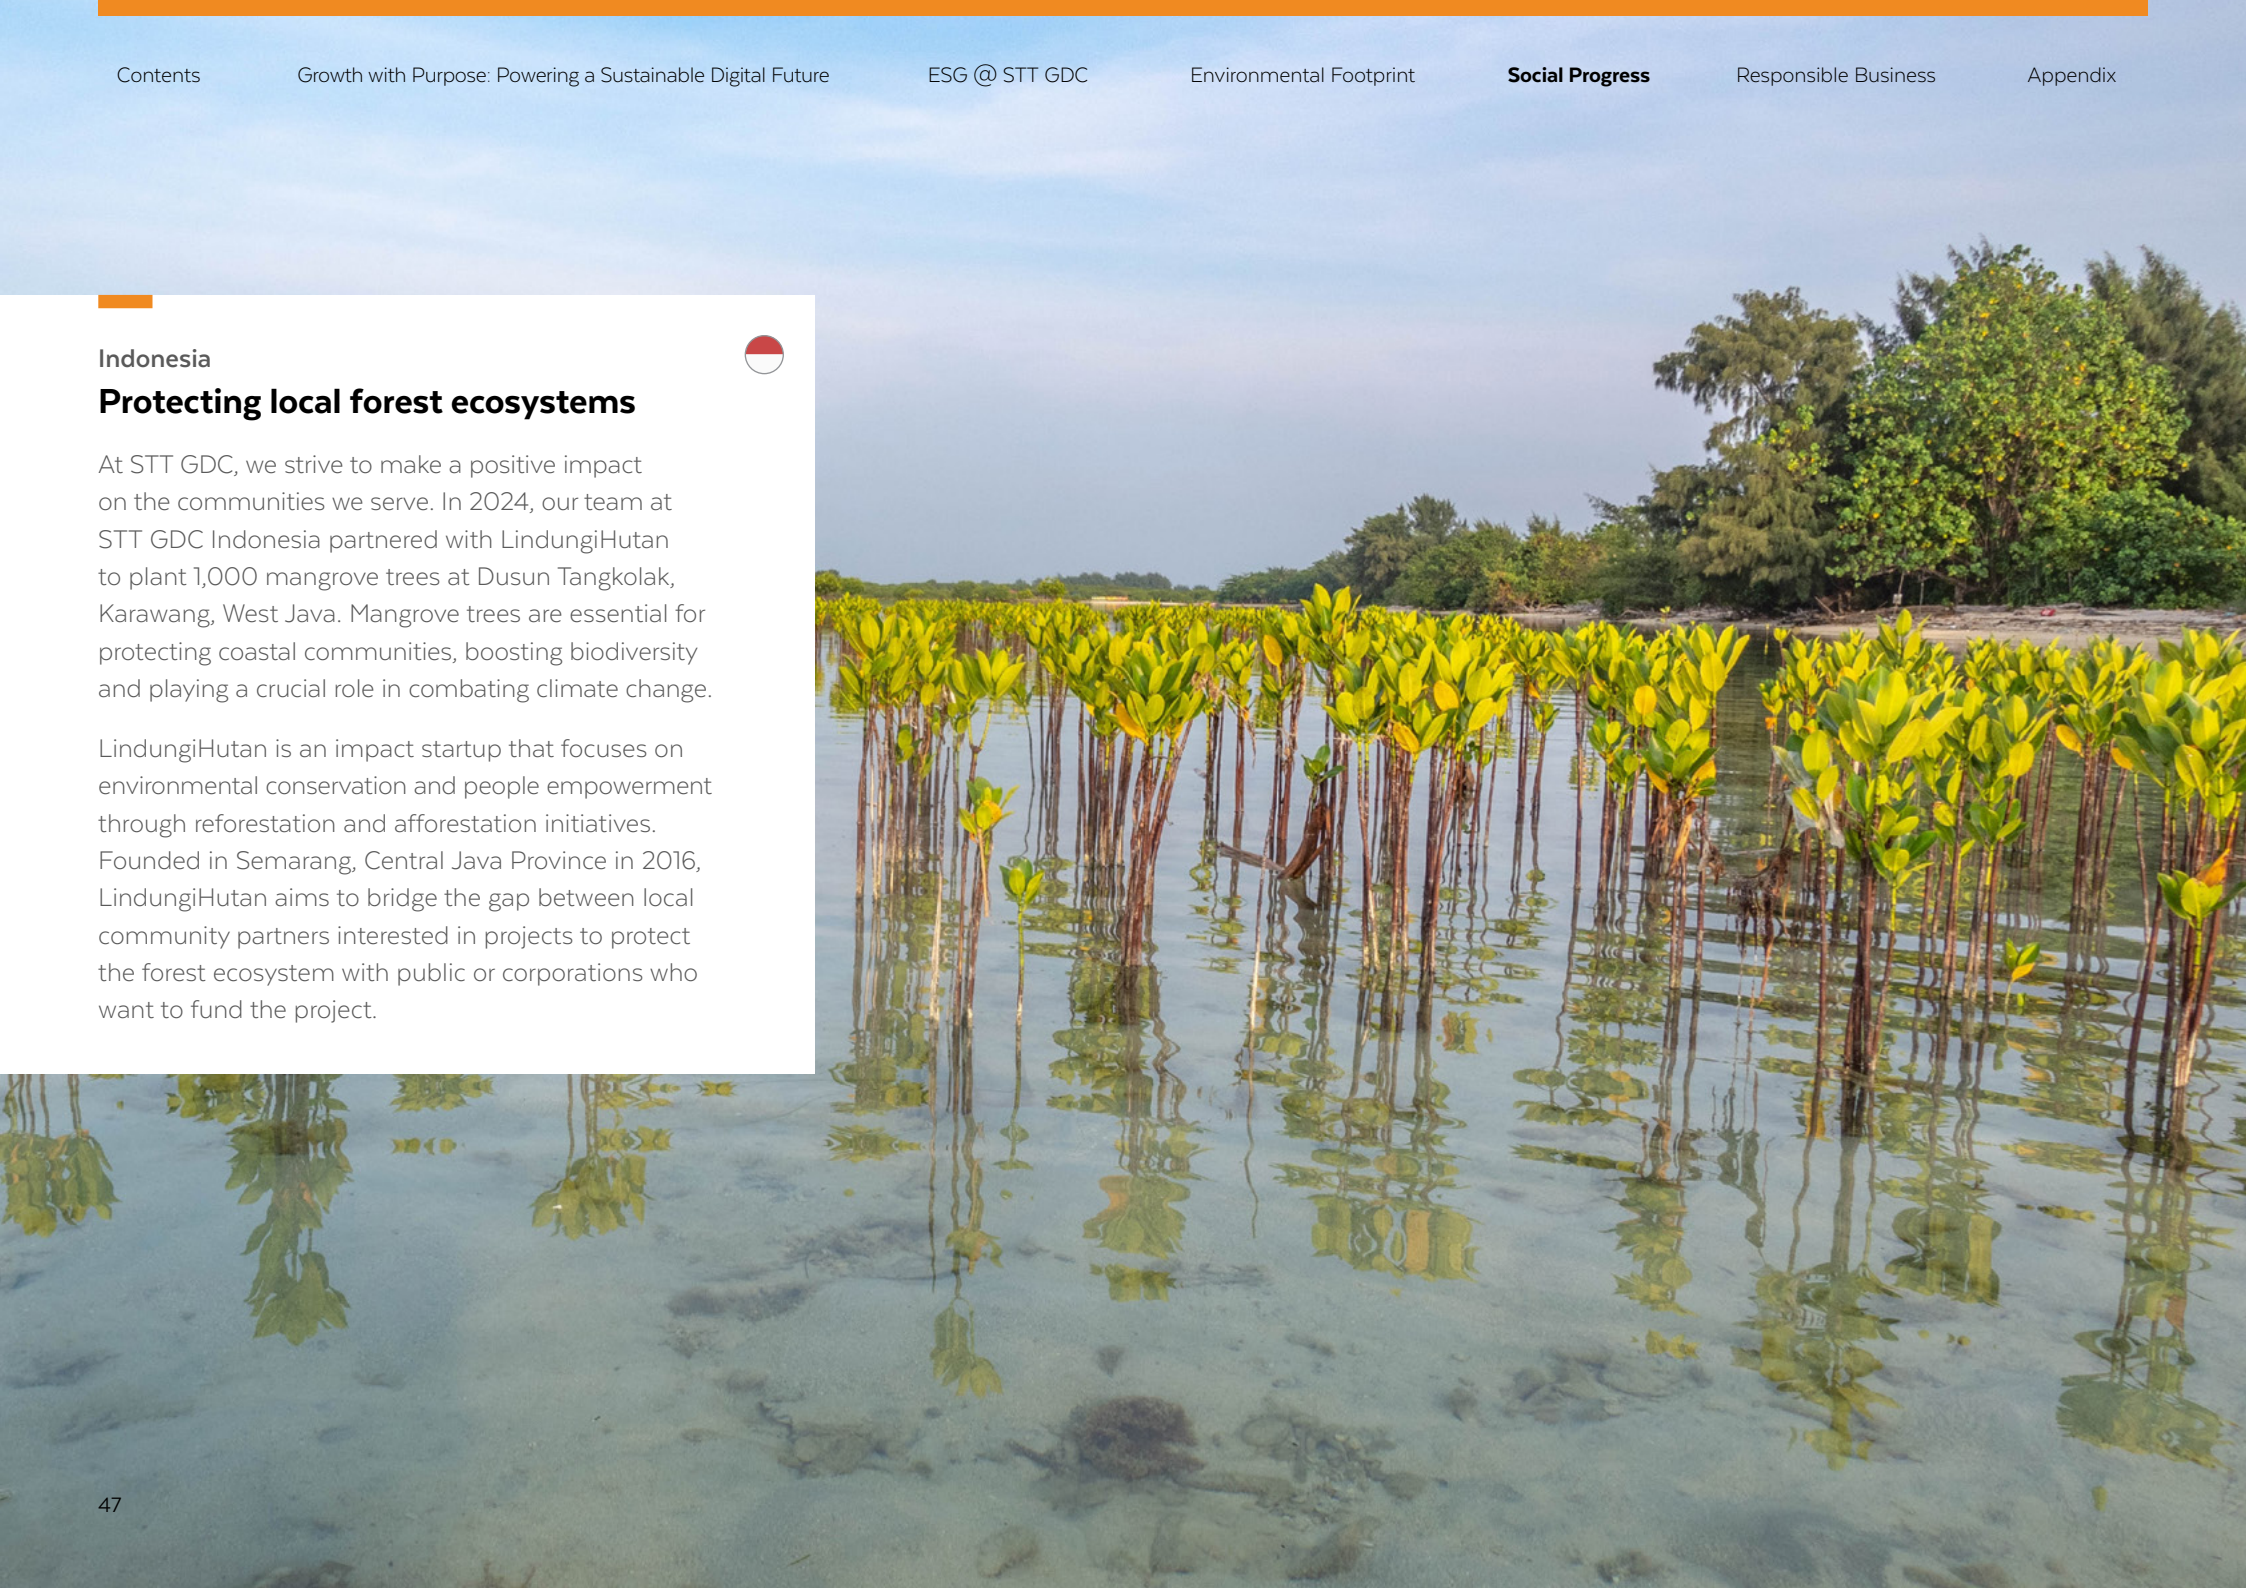

Indonesia

Protecting local forest ecosystems

At STT GDC, we strive to make a positive impact on the communities we serve. In 2024, our team at STT GDC Indonesia partnered with LindungiHutan to plant 1,000 mangrove trees at Dusun Tangkolak, Karawang, West Java. Mangrove trees are essential for protecting coastal communities, boosting biodiversity and playing a crucial role in combating climate change.

LindungiHutan is an impact startup that focuses on environmental conservation and people empowerment through reforestation and afforestation initiatives. Founded in Semarang, Central Java Province in 2016, LindungiHutan aims to bridge the gap between local community partners interested in projects to protect the forest ecosystem with public or corporations who want to fund the project.

Responsible Business

Governance and Integrity

Cybersecurity

Economic Vitality of Communities and Supply Chain

Climate Risk Resilience

Sustainable Financing

Green Buildings

Responsible Procurement

Powering a sustainable digital future through an unwavering commitment to governance and integrity, strengthened cybersecurity, responsible procurement practices and enhancing the economic vitality of the communities we operate in.

Governance and Integrity

We have established a comprehensive risk management framework to proactively identify and mitigate risks across the Group. The Board of Directors holds ultimate responsibility for overseeing risk governance, ensuring that the company maintains a sound risk management system and stringent internal controls to safeguard the interests of our stakeholders.

Integrity is at the core of our business. We enforce a strict zero-tolerance policy on bribery, kickbacks and corruption of any kind, supported by well-defined policies and our Code of Conduct. To uphold these standards, all employees receive ongoing training and clear communication on anti-corruption measures, ethical conduct and compliance requirements.

Our commitment to integrity extends beyond policies—it is embedded in every aspect of our operations. We adhere to the highest standards of business ethics and fully comply with all applicable laws and regulations. Through strong corporate governance, we strive to create long-term value for our shareholders, employees, customers and partners while maintaining the trust and confidence of all our stakeholders.

As a company, we are steadfast in our commitment to conducting business with integrity, upholding the highest standards of ethics and maintaining full compliance with all applicable laws and regulatory requirements. Our dedication to strong corporate governance ensures transparency, accountability and responsible decision-making at every level.

We strive to create long-term value for our shareholders, employees, customers and partners by fostering a culture of trust, fairness and sustainability. Through ethical leadership and sound governance practices, we remain focused on driving sustainable growth while upholding the confidence of all our stakeholders.

100%

Cybersecurity

Acknowledging the integral role data security plays in sustaining the trust of our clients and stakeholders, we embrace cutting-edge technologies, robust protocols and continuous improvement initiatives to ensure the resilience and integrity of our cybersecurity framework. This not only fortifies our operational reliability but also aligns with our broader mission of fostering a secure and sustainable digital future.

To strengthen our commitment to comprehensive cybersecurity, we have integrated our IT and Operational Technology (OT) cybersecurity policies to create a balanced approach that prioritises both operational uptime and security. This holistic, risk-based approach draws from the best practices of both domains, strengthening resilience against emerging cyber threats in both IT and OT environments. In addition, we have adopted a Zero Trust Security Framework, a cloud-native security platform designed to provide secure access to web, cloud and private applications, protecting users and data from cyber threats.

To further enhance cybersecurity, we have initiated a Global Vulnerability Assessment and Penetration Testing programme. This structured approach identifies, analyses and remediates vulnerabilities within our IT and OT systems, safeguarding our infrastructure. In Singapore, we have implemented a leading OT security monitoring platform to ensure real-time visibility and protection of our industrial control systems. This is progressively being rolled out to other regions. To test and refine our incident response plans, we have conducted a joint IT-OT Tabletop Exercise in simulated cyberattack scenarios to ensure a coordinated response to cyber-physical threats.

Adopting a unified approach towards global cybersecurity

In 2024, we successfully established our Global Security Operations Centre (GSOC) in Singapore, India and Indonesia. In parallel, STT GDC Thailand and Japan are in the process of onboarding to the GSOC, with completion targeted for mid-2025. The remaining regions will be onboarded in a phased approach thereafter.

This achievement marks a significant milestone for STT GDC, enabling a comprehensive and unified approach to Security Situational Awareness on a global scale. The GSOC covers both Information Technology (IT) and Operational Technology (OT), reinforcing our commitment to proactive and integrated security management across our global operations.

The GSOC employs automated technology to deliver integrated intelligence and analytics, enhancing security monitoring, incident response and risk mitigation. This centralised function ensures enterprise resilience by offering real-time situational awareness to protect STT GDC's assets and safeguard personnel.

Proactive threat detection

GSOC allows STT GDC to proactively detect security threats in near-real-time. Using advanced monitoring tools, threat intelligence integration, and skilled analysts, the GSOC helps identify potential risks before they escalate into major incidents.

Enhanced visibility and situational awareness

The GSOC offers enhanced visibility into STT GDC's security posture through real-time monitoring, analysis of security events and the generation of meaningful reports for management, facilitating informed decision-making.

Rapid incident response

With the GSOC in place, STT GDC can swiftly and efficiently respond to security incidents. Defined response procedures, well-trained staff and coordination across IT and OT environments ensure rapid and effective incident management, mitigating potential damage.

Continuous improvement and adaptability

The GSOC fosters a culture of continuous improvement through regular reviews, policy updates, and adaptation to evolving threats and technologies, ensuring STT GDC's resilience against emerging risks.

Reduced downtime and business impact

Timely detection and response to security incidents minimises downtime and reduces the impact on business operations, ensuring business continuity and preventing financial losses.

Threat intelligence integration

The GSOC integrates threat intelligence to stay updated on the latest cyber threats and attack vectors, helping STT GDC maintain a proactive stance on security preparedness.

Consistent security policies

The GSOC ensures consistent implementation and enforcement of security policies across global operations, maintaining a standardised security posture and ensuring that the same security standards are applied across the group.

Risk mitigation and asset protection

Through proactive monitoring and response, the GSOC mitigates risks and protects critical IT and OT assets, safeguarding STT GDC's intellectual property, sensitive data and overall reputation.

Economic Vitality of Communities and Supply Chain

We believe that driving economic growth in local communities is a vital part of our commitment to long-term value creation and sustaining our social license to operate. By fostering economic resilience through job creation, strategic partnerships and support for local businesses, we aim to build a more inclusive and sustainable future.

Our commitment extends beyond our own operations. We actively promote a responsible and transparent supply chain, prioritising fair labour practices, environmental stewardship and ethical sourcing. By integrating sustainability into procurement decisions, we create opportunities for local suppliers while reinforcing accountability across our supplier network.

To further our impact, we prioritise partnerships that drive meaningful economic and social progress. Through collaborations with educational institutions and industry leaders, we support skills development programs that equip local talent with the expertise needed to thrive in the evolving data centre industry.

By championing these initiatives, we seek to make a lasting difference—empowering communities, fostering sustainable growth and contributing to a more resilient and equitable economy.

Inspiring future talent

Our Singapore and Indonesia teams welcomed students from the Singapore Institute of Technology and the Institute of Technical Education and Nusantara Data Centre Academy for a series of immersive learning visits. These aspiring professionals, specialising in fields such as Sustainable Built Environment, Facilities Management, Cybersecurity and Systems and Network, gained firsthand insights into the critical role data centres play in powering today's digital world.

Through guided tours and interactive sessions, we provided an in-depth look at our operations, showcasing the diverse expertise required to ensure seamless facility management, security and sustainability. Our teams shared real-world applications of industry best practices, offering students a deeper appreciation of the technical and strategic functions that keep data centres running efficiently.

By facilitating these learning experiences, we reaffirm our commitment to nurturing future talent and fostering industry-ready professionals. This initiative underscores our dedication to building a skilled workforce while championing sustainable practices that drive the long-term resilience of the digital infrastructure industry.

UK

Investing in future talent through hands-on learning experiences

As part of our ongoing commitment to nurturing the next generation of digital infrastrucutre professionals and addressing the skills shortage in the growing data centre sector, VIRTUS partnered with the University Technical Colleges (UTC Reading, UTC Heathrow, UTC Oxfordshire and UTC Swindon) through the Digital Futures Programme. This initiative aims to increase awareness of the data centre industry and offer Year 10 and Year 12 students with valuable hands-on learning experience, equipping them with essential skills for future careers in the industry.

Under the programme, VIRTUS staff members volunteer and support challenge days, as well as deliver masterclasses, skills sessions and engineering units at four UTCs. These engagement activities are aimed at simulating real-world data centre industry scenarios, fostering practical problem-solving skills and developing employability skills.

UTC students are also invited for a week-long work experience week at our data centres. This experience plays a crucial role in providing students with hands-on exposure to a real-world working environment, allowing them to apply their academic knowledge in practical settings.

VIRTUS has collaborated with UTC Heathrow to support the Digital Futures Programme since 2021, during which 600 students have successfully completed the programme and gained valuable industry experience.

Climate Risk Resilience

In line with our mission to power a sustainable digital future, we believe that it is important to respond to the mid-term and long-term challenges arising from climate change.

In 2023, we started our journey to conduct a climate scenario analysis, focussing on physical risks to identify possible climate futures and assess our resilience across all our assets. The scope of coverage includes multiple climate physical risks including floods, heatwaves and heavy rain for existing and future assets up to a 2050 time horizon.

For the analysis, we selected two emissions scenarios aligned to the Intergovernmental Panel on Climate Change (IPCC) scenarios, which project future climate conditions based on different assumptions about greenhouse gas emissions, socio-economic factors and policy decisions. Further description of the scenarios used are summarised on the next page.

Based on the two identified scenarios, the potential financial impact of chronic climate risks such heavy rain and increase in ambient temperatures would fall between a 21% and 26% increase in water costs for cooling in high risk assets.

Scenario	Description	Assumptions and risks	Estimated global average temperature rise by 2100
SSP5/ RCP 8.5	This scenario, also called the business as usual (BAU) scenario, outlines a pathway driven by rapid economic growth and a strong reliance on fossil fuels, leading to a very high-carbon global economy.	Assumes limited political momentum and climate ambition with no climate change mitigation actions taken. Risks include: • Rising temperatures • Changing rainfall patterns • Increased frequency and intensity of extreme weather	**4.4°C**
SSP2/ RCP 4.5	This scenario represents a "middle-of-the-road" pathway with moderate progress towards sustainability and limited climate policy interventions.	Assumes small shifts in societal, political and economic trends, resulting in heterogeneous efforts globally towards reducing emissions. Risks include: • Income inequality • Local, severe climate impacts • Low likelihood of global catastrophes, like mass extinctions	**2.7°C**

Top 5 physical climate risks

The identification of these risks underscore the importance of climate risk management within our portfolio. We have integrated these risks into our enterprise risk management framework, ensuring that it is monitored and mitigated across various levels of the organisation.

Hazard	Potential business risk	Potential financial impact	Mitigation measures
Flooding and rising sea levels 	Flooding can cause significant damage to property, equipment and infrastructure while also isolating sites by obstructing access for maintenance and delivery vehicles.	Cost of damage to infrastructure and loss of revenue from interruption of services.	Site selection and critical infrastructure screening for flooding go beyond industry norms, evaluating potential flood scenarios with added buffers to account for climate change impacts. On-site contingency plans include storage of critical supplies to reduce downtime if access is obstructed during a significant flood event. In certain cases, sites or buildings are elevated to further mitigate risk.
Tropical cyclones/ windstorms 	Storms can damage utility infrastructure, including electricity generation and transmission systems, leading to power outages. They also pose a risk to roof-mounted equipment, potentially causing operational disruptions.	Disruption in electricity transmission would lead to an increase in diesel used for generators, causing a short-term increase in running costs. Additionally, tropical cyclones and windstorms may incur substantial repair expenses, with the risk of extended site downtime if damage exceeds the designed resilience.	The quantity of on-site fuel storage is optimised to match local risk factors, ensuring a reliable supply. Agreements are established with multiple fuel suppliers to maintain an adequate service levels for fuel deliveries. Spare parts are stored locally, supported by service level agreements that enable rapid repairs when needed. Additionally, parapet and screen walls are incorporated where appropriate to protect roof-mounted equipment.

Hazard	Potential business risk	Potential financial impact	Mitigation measures
Heat stress (mean temperature rise) 	Heat stress can lead to increase in energy costs associated with cooling.	Increased energy costs.	Continuous process to improve site PUE can help mitigate the risk of rising energy costs.
Increase in ambient temperature/heatwaves 	Increase in ambient temperature/heatwaves can cause cooling failures at data centres, as well as impact the electricity grid stability which could result in operational downtime.	Increase in ambient temperature/heatwaves could lead to increased energy costs for cooling. Increased capital cost for higher-rated cooling systems.	Embed technical criteria into our procurement process for new-build data centres and end-of-life asset refreshes to ensure that equipment can operate effectively under the identified climate scenarios. For example, cooling systems are selected for being able to operate under the highest recorded temperatures of the past 20 years, with an additional safety buffer incorporated.
Water scarcity 	Water scarcity can cause water prices to rise.	Study transition to air-cooled chillers in water-scarce areas to reduce water use, as well as improve on-site water treatment to enhance water efficiency, where feasible.	Increased water costs.

Sustainable Financing

In August 2024, we enhanced our Sustainability-Linked Financing Framework (SLFF) to further align our financial strategy with ambitious ESG goals. First introduced in July 2022, the SLFF is a key component of our ESG strategy. It enables us to structure financing, where applicable, through Sustainability-Linked Financing Transactions (SLFTs), including Sustainability-Linked Bonds (SLBs), Sustainability-Linked Perpetuals (SLPs) and Sustainability-Linked Loans (SLLs), ensuring advancement of our mid- to long-term sustainability goals.

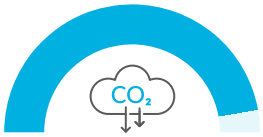

With this enhancement, the SLFF sets even more ambitious Key Performance Indicators (KPIs) and Sustainability Performance Targets (SPTs), reinforcing our commitment to driving meaningful environmental progress. These improvements strengthen our sustainability strategy by advancing three key targets while broadening the SLFF's scope to encompass STT GDC's subsidiaries across all geographies.

This ensures that our sustainability commitments are deeply embedded across our global operations, fostering a more unified and impactful approach to achieving our long-term sustainability goals.

In January 2024, we successfully issued $450 million of SLP securities under the 2022 SLFF as part of our S$1.5 billion multicurrency debt issuance programme. Priced at 5.7% after a strong book building process, this is our debut perpetual securities offering and marks several firsts in the industry — the first Singapore dollar denominated SLP, the first public benchmark SLP in Asia, as well as the first public perpetual by a pure play data centre globally.

The SLP surpassed expectations in terms of size (50% upsize) and investor mix, with impressive prices tightening achieved. Following the original issue, we received strong follow-on demand through reverse enquiries from institutional investors, which allowed us to issue an additional S$50 million re-tap two weeks later, bringing the total size of the SLP to S$500 million.

Targets under 2022 SLFF	Targets under enhanced 2024 SLFF	2024 Performance
60% renewable energy by 2026	85% renewable energy by 2028	 **78.5%** renewable energy
40% reduction in carbon intensity by 2025, against a 2021 baseline	70% reduction in carbon intensity by 2028, against a 2021 baseline	 **66.2%** reduction in carbon intensity against a 2021 baseline
55% green data centres by 2026	65% green data centres by 2028	 **51.3%** green data centres

Green Buildings

We are committed to increasing our percentage of green*-certified buildings to 65% by 2028 and to have all newly developed buildings under our operational control certified as green buildings. As of 2024, 51.3% of our data centres are green building certified.

Buildings and construction activities are responsible for more than 40% of global carbon emissions. By actively pursuing green building certifications, we ensure that our data centres are not only built with sustainability at their core but are also optimised for higher operational efficiency and reduced environmental impact. These certifications serve as a commitment to integrating advanced energy-efficient technologies and best practices, helping us reduce emissions and contribute to a more sustainable future.

*Following our agreed externally validated definitions, a data centre is classified as green if it has achieved any one of the following recognised green building certifications:

i. BCA Green Mark: GoldPlus or Platinum
ii. SS564 Sustainable Data Centres
iii. BREEAM: Excellent or Outstanding
iv. LEED: Gold or Platinum
v. CEEDA: Silver or Gold
vi. CASBEE: A or S
vii. DGNB: Gold or Platinum
viii. NABERS: 4.5 stars or better
ix. IGBC: Gold or Platinum

Green data centres

51.3%

Goal: 65% by 2028

India

First data centre in India to achieve the IGBC Net Zero Energy certification

STT GDC continues to set benchmarks in sustainable data centre operations, with our Bangalore DC3 facility becoming the first data centre in India to receive the Indian Green Building Council (IGBC) Net Zero Energy (Operations) certification in 2024. The facility also earned the IGBC Green Data Centre Platinum accreditation, alongside our Chennai DC3 and Noida DC1 facilities which were also awarded the IGBC Gold status, reinforcing our leadership in sustainable data centre design and operations.

The IGBC Net Zero Energy certification for Bangalore DC3 is a significant milestone in STT GDC India's sustainability journey. Beyond the building's utilisation of 100% renewable energy, this certification recognises our innovative approach towards achieving efficiencies in our building envelope, air conditioning systems and equipment selection.

Responsible Procurement

We expect our suppliers to adhere to the same high standards of dedication to human rights and sustainability that we uphold ourselves. Our Supplier Code of Conduct, which adheres to international standards and certifications, clearly outlines our expectations and explicitly condemns the use of conflict materials.

In our pursuit of transparency and proactive risk management, we rigorously assess both existing and new suppliers against this code. In 2024, we kickstarted the process of strengthening ESG screening across all procurement processes throughout the group.

Our operations and procurement choices profoundly impact social, environmental and economic dynamics within our industry and across global supply chains. By actively mitigating sustainability risks within our supply chain, we not only reinforce the trust of our stakeholders but are also able to better navigate the evolving requirements of due diligence in supply chains.

*Includes both STT GDC and customer renewable energy procurement

Definitions

**These metrics do not include the electricity consumption of selected customers in Singapore in line with our pilot, where these customers have positively confirmed that they are taking accountability of the emissions arising from their IT equipment housed in our data centres.

Electricity consumption	This includes electricity procured from external suppliers and on-site solar generation to power our data centres.
Renewable energy factor (REF)	STT GDC procures and uses renewable energy from on-site generation, power purchase agreements (PPAs), Energy Attribute Certificates (EACs) and green tariffs. REF is calculated based on the methodology in the ISO 30134 standard. $REF = \frac{\text{Renewable energy consumption}}{\text{Total energy consumption}} \times 100\%$
Carbon intensity**	$\text{Carbon intensity} = \frac{\text{Annual Scope 1 + Scope 2 market based GHG emissions (Tonnes } CO_2e)}{\text{Annual consolidated revenue (SGD million)}}$
Scope 1	Direct GHG emissions from onsite fuel combustion, refrigerants/SF6 leaks at our facilities. This is calculated based on UK Defra emission factors.
Scope 2**	Indirect GHG emissions from purchased electricity. The location-based method is based on emission factors of the electricity grids that provide electricity to our data centres. Grid emission factor sources such as EEA, UK Defra, Singapore EMA and Indonesia ESDM are used in our calculations. The market-based method includes consideration of contractual arrangements under which STT GDC procures power from specific suppliers or sources, such as renewable energy. In the market-based method, we also capture the impact from power purchase agreements (PPAs), and the purchase of energy attribute certificates (EACs) and green tariffs.

PUE	$PUE = \frac{\text{Total Facility Energy Consumption}}{\text{IT Equipment Energy}}$ The calculation of PUE is adjusted to account for stabilised assets and is based on the methodology in the ISO 30134 standard.
WUE	$WUE = \frac{\text{Total Facility Water Consumption}}{\text{IT Equipment Energy}}$ The calculation of WUE is adjusted to account for stabilised assets and is based on the methodology in the ISO 30134 standard.
Green data centres %	A green data centre is where a building is, or is expected to be, certified with any one of the following recognised green building certification systems: a) BCA Green Mark: GoldPlus or Platinum b) SS564 Sustainable Data Centres c) BREEAM: Excellent or Outstanding d) LEED: Gold or Platinum e) CEEDA: Silver or Gold f) CASBEE: A or S g) DGNB: Gold or Platinum h) NABERS: 4.5 stars or better i) IGBC: Gold or Platinum
Total Recordable Incident Rate (TRIR)	$TRIR = \frac{\text{Number of recordable work related incidents (including fatalities)}}{\text{Number of hours worked}} \times 200{,}000$

Scope 3 Methodology and Emission Factors

STT GDC calculates and reports Scope 3 emissions for all relevant categories. The following table summarises the relevant categories and a description of the methodologies and emission factors used.

Scope 3 category	Emissions calculation methodology	Emission factor source
Category 1: Purchased goods and services	This category includes emissions from the purchase of goods and services for the enterprise, and the operation and maintenance of the operating data centres. Activity data is mainly derived from procurement data within each legal entity in the group. A spend-based emission factor is then applied to this data to calculate emissions. Where possible, activity-based emission calculations are used to obtain higher-quality data such as procured steel and concrete, as well as electricity and diesel consumed by contractors in construction.	US EEIO emission factor (adjusted for inflation)
Category 2: Capital goods	This category includes calculation of emissions arising from capital goods such as long-lead equipment for use in our data centres. Activity data is mainly derived from procurement data within each legal entity in the group. A spend-based emission factor is then applied to this data to calculate emissions.	US EEIO emission factor (adjusted for inflation)
Category 3: Fuel- and energy-related activities (not included in Scope 1 or Scope 2)	Electricity and total diesel used in operational assets for the reporting year was used to calculate the well-to-wire, well-to-tank and transmission and distribution loss emissions.	IEA Lifecycle Emission Factors, GEF (refer to Methodology and Emission factors), UK Defra (2024)
Category 4: Upstream transportation and distribution	Calculation of the emissions from this category includes courier and shipping activities. Activity data is mainly derived from procurement data within each legal entity in the group. A spend-based emission factor is then applied to this data to calculate emissions.	US EEIO emission factor (adjusted for inflation)
Category 5: Waste generated in operations	This category includes the emissions from the transportation of waste to their disposal location. UK Defra is used as the approximation to derive estimated emissions for this category.	UK Defra (2024)

Scope 3 category	Emissions calculation methodology	Emission factor source
Category 6: Business travel	This category includes the emissions from air travel, rail travel, rental cars, taxi and hotel stays for business purposes.	UK Defra (2024), US EPA GHG Emission Factors Hub (2024)
Category 7: Employee commuting	Activity data for this category is calculated based on several methods, including employee surveys, census information and publicly available literature. From this information, the weighted average transport mode for employee commute is calculated for every geography. Each type of transport mode is multiplied by the appropriate emission factor.	UK Defra (2024), US EPA GHG Emission Factors Hub (2024)
Category 13: Downstream leased assets	Starting 2024, a pilot programme was launched in Singapore, where we collaborated with selected customers who have positively confirmed that they account for their emissions from our data centres within their Scope 2 inventory. These emissions are reported under STT GDC's Scope 3 inventory. Activity data is based on the energy consumption of these customers' IT equipment billed in their invoices.	Singapore EMA (2023)
Category 15: Investments	The calculation of this category includes emissions from data centres in the portfolio in which STT GDC does not have majority share in terms of operational and financial control. The emissions are based on actual reported Scope 1 and Scope 2 emissions in the assets multiplied by equity share.	Not applicable

Independent Assurance Statement

Certificate No: C786648

INDEPENDENT ASSURANCE STATEMENT

Introduction

DNV Business Assurance Singapore Pte. Ltd. ('DNV') has been commissioned by the management of STT GDC Pte. Ltd. ('STT GDC', or 'the Company', a company registered with the Accounting and Corporate Regulatory Authority, Singapore (UEN: 201228542D) to carry out an independent Limited level of assurance of selected sustainability/non-financial disclosures reported in its ESG Report (hereafter referred as 'Report') covering the calendar year 2024.

Assertions relating to GHG emissions (Scope 1 and 2), Carbon Intensity and Carbon Credits, Total Energy Consumption, Renewable Electricity Percentage, Water Withdrawal, New Employee Hires and Employee Turnover, Women Representation in Senior and Mid Management, Total Recordable Incident Rate and Total Number of Assets that have Achieved a Sustainability Certification for the period 01 January 2024 to 31 December 2024.

The disclosures have been prepared by STT GDC:

- in reference to requirements of Global Reporting Initiative (GRI) sustainability reporting standards 2021 and
- The Greenhouse Gas Protocol: *A Corporate Accounting and Reporting Standard*
- ISO/IEC 30134-4:2017 Information technology — Data centres — Key performance indicators

DNV has carried out assurance engagement in accordance with DNV's VeriSustain™ protocol, V6.0, which is based on our professional experience and international assurance practice, and the international standard in Assurance Engagements, ISAE 3000 (revised) - Assurance Engagements other than Audits or Reviews of Historical Financial Information. DNV's Verisustain™ Protocol has been developed in accordance with the most widely accepted reporting and assurance standards. Apart from DNV's Verisustain™ protocol, DNV team has also followed ISO 14064-3 - Specification with guidance for the verification and validation of greenhouse gas statements; to evaluate indicators wrt Greenhouse gases disclosures respectively.

The intended user of this assurance statement is the Management of STT GDC.

We planned and performed our work to obtain the evidence we considered sufficient to provide a basis for our conclusion, so that the risk of this conclusion being in error is reduced but not reduced completely.

We have not performed any work, and do not express any conclusion, on any other information that may be published outside of the Report and/or on Company's website for the current reporting period.

Responsibilities of the Management of STT GDC and of the Assurance Provider

The Management of STT GDC has the sole responsibility for the preparation of the Report and is responsible for all the information disclosed. The company is responsible for maintaining processes and procedures for collecting, analyzing and reporting the information and also, ensuring the quality and consistency of the information presented in the Report. STT GDC is also responsible for ensuring the maintenance and integrity of its website and any referenced disclosures on their website.

In performing this assurance work, DNV's responsibility is to the Management of the Company; however, this statement represents our independent opinion and is intended to inform the outcome of the assurance to the stakeholders of the Company.

Scope, Boundary and Limitations

The agreed scope of work included a limited level of assurance of the information on the selected non-financial performance indicators (annex 1) which were disclosed in the ESG Report prepared by STT GDC based on GRI Topic-specific Standards for the identified material topics for the activities undertaken by the Company during the reporting period 1st January 2024 to 31st December 2024.

As per the agreed scope of work, the boundary covers the performance of STT GDC's operations globally that fall under the direct operational control of the Company. Based on the agreed scope with the Company, the boundary of assurance covers STT GDC and its portfolio companies in the Singapore, South Korea, Indonesia, the United Kingdom (UK), Japan and India.

Inherent Limitation(s):

DNV's assurance engagements are based on the assumption that the data and information provided by the Company to us as part of our review have been provided in good faith, are true, and are free from material misstatements.

The assurance scope has the following limitations:

- The assurance engagement considers an uncertainty of ±5% based on materiality threshold for estimation/measurement errors and omissions.

- DNV has not been involved in the evaluation or assessment of any financial data/performance of the company. DNV does not take any responsibility for the financial data reported in the ESG report of the Company.
- The assessment is limited to data and information within the defined reporting period. Any data outside this period is not considered within the scope of assurance.
- Data outside the operations specified in the assurance boundary is excluded from the assurance, unless explicitly mentioned otherwise in this statement.
- The assurance does not cover the Company's statements that express opinions, claims, beliefs, aspirations, expectations, aims, or future intentions. Additionally, assertions related to Intellectual Property Rights and other competitive issues are beyond the scope of this assurance.
- The assessment does not include a review of the Company's strategy or other related linkages expressed in the Report. These aspects are not within the scope of the assurance engagement.
- The assurance does not extend to mapping the Report with reporting frameworks other than those specifically mentioned. Any assessments or comparisons with frameworks beyond the specified ones are not considered in this engagement.
- Aspects of the Report that fall outside the mentioned scope and boundary are not subject to assurance. The assessment is limited to the defined parameters.
- The assurance engagement does not include a review of legal compliances. Compliance with legal requirements is not within the scope of this assurance, and the Company is responsible for ensuring adherence to relevant laws.

DNV expressly disclaims any liability or co-responsibility for any decision a person or an entity may make based on this Independent Assurance Statement.

Assurance process

As part of the assurance process, a multi-disciplinary team of assurance specialists performed assurance work for selected sites of STT GDC. We adopted a risk-based approach, that is, we concentrated our assurance efforts on the issues of high material relevance to the Company's business and its key stakeholders. We carried out the following activities:

Limited Level of Assurance
Reviewed the disclosures in the report. Our focus included general disclosures, management processes, principle wise performance (essential indicators, and leadership indicators) and any other key metrics specified under the reporting framework.
Understanding the key systems, processes and controls for collecting, managing and reporting the non-financial disclosures in report.
Walk-through of key data sets. Understand and test, on a sample basis, the processes used to adhere to and evaluate adherence to the reporting principles.
Collect and evaluate documentary evidence and management representations supporting adherence to the reporting principles.
Interviews with the senior managers responsible for management of disclosures. We were free to choose interviewees and interviewed those with overall responsibility of monitoring, data collation and reporting the selected indicators.
DNV audit team conducted on-site audits for corporate offices and sites. Sample based assessment of site-specific data disclosures was carried out. We were free to choose sites for conducting our assessment.
Reviewed the process of reporting as defined in the assessment criteria.

Conclusion

On the basis of the limited level of assessment undertaken, nothing has come to our attention to suggest that the disclosures are not fairly stated and are not prepared, in all material aspects, in accordance with the reporting criteria.

Statement of Competence and Independence

DNV applies its own management standards and compliance policies for quality control, which are based on the principles enclosed within ISO IEC 17029:2019 – *Conformity assessment – General principles are requirements for validation and verification bodies*, and accordingly maintains a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

We have complied with the DNV Code of Conduct during the assurance engagement. DNV's established policies and procedures are designed to ensure that DNV, its personnel and, where applicable, others are subject to independence requirements (including personnel of other

entities of DNV) and maintain independence where required by relevant ethical requirements. This engagement work was carried out by an independent team of sustainability assurance professionals. DNV was not involved in the preparation of any statements or data included in the Report except for this Assurance Statement for internal use of STT GDC.

Purpose and Restriction on Distribution and Use

This assurance statement, including our conclusion, has been prepared solely for the Company in accordance with the agreement between us. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Management of the Company for our work or this report.

GRI 3: Material Topics 2021	3-1	Process to determine material topics	Materiality Approach
	3-2	List of material topics	Materiality Approach
	3-3	Management of material topics	Material Topics

GRI standard	Disclosure		Reference and response/ explanation for omission
Climate Change and Energy			
GRI 3: Material topics 2021	3-3	Management of material topics	Environmental Footprint
GRI 302: Energy 2016	302-1	Energy consumption within the organisation	Renewable Energy
	302-3	Energy intensity	Energy Efficiency
	302-4	Reduction of energy consumption	Energy Efficiency
GRI 305: Emissions 2016	305-1	Direct (Scope 1) GHG emissions	Decarbonisation
	305-2	Energy indirect (Scope 2) GHG emissions	Decarbonisation
	305-3	Other indirect (Scope 3) GHG emissions	Refining Scope 3 emissions data
	305-4	GHG emissions intensity	GHG emissions inventory
	305-5	Reduction of GHG emissions	Decarbonisation
Water			
GRI 3: Material topics 2021	3-3	Management of material topics	Water Stewardship
GRI 303: Water and effluents 2018	303-1	Interactions with water as a shared resource	Water Stewardship
	303-3	Water withdrawal	Environmental and Social Data Sheet
Waste			
GRI 3: Material topics 2021	3-3	Management of material topics	Waste Management
GRI 306: Waste 2020	306-1	Waste generation and significant waste-related impacts	Waste Management
	306-2	Management of significant waste-related impacts	Waste Management
	306-3	Waste generated	Environmental and Social Data Sheet
	306-4	Waste diverted from disposal	Environmental and Social Data Sheet
	306-5	Waste directed to disposal	Environmental and Social Data Sheet

GRI standard	Disclosure		Reference and response/ explanation for omission
Human Capital Management			
GRI 3: Material topics 2021	3-3	Management of material topics	Talent Management
GRI 401: Employment 2016	401-1	New employee hires and employee turnover	Talent Management
	401-2	Benefits provided to full-time employees that are not provided to temporary or part-time employees	Providing competitive compensation and benefits
	401-3	Parental leave	A total of 8 female and 37 male colleagues across the group took maternity/paternity leave. All male staff returned to work after the leave ended, while 5 out of the 8 female staff returned.
GRI 404: Training and Education 2016	404-1	Average hours of training per year per employee	Fuelling growth through continuous training and development
	404-2	Programmes for upgrading employee skills and transition assistance programmes	Fuelling growth through continuous training and development
	404-3	Percentage of employees receiving regular performance and career development reviews	99% of our employees receive a regular performance and career development review
Health, Safety and Well-being			
GRI 3: Material topics 2021	3-3	Management of material topics	Health, Safety and Well-being
GRI 403: Occupational health and safety 2018	403-1	Occupational health and safety management system	Health, Safety and Well-being
	403-2	Hazard identification, risk assessment, and incident investigation	Health, Safety and Well-being
	403-3	Occupational health services	Health, Safety and Well-being
	403-4	Worker participation, consultation and communication on occupational health and safety	Health, Safety and Well-being
	403-5	Worker training on occupational health and safety	Health, Safety and Well-being
	403-6	Promotion of worker health	Health, Safety and Well-being
	403-7	Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Health, Safety and Well-being

GRI standard	Disclosure		Reference and response/ explanation for omission
GRI 403: Occupational health and safety 2018	403-8	Workers covered by an occupational health and safety management system	Health, Safety and Well-being
	403-9	Work-related injuries	Health, Safety and Well-being
	403-10	Work-related ill health	Health, Safety and Well-being
Diversity and Inclusion			
GRI 3: Material topics 2021	3-3	Management of material topics	Talent Management
GRI 405: Diversity and equal opportunity 2016	405-1	Diversity of governance bodies and employees	Talent Management
GRI 406: Non-discrimination	406-1	Incidents of discrimination and corrective actions taken	No incidents were reported during the reporting period
Governance			
GRI 3: Material topics 2021	3-3	Management of material topics	Governance and Integrity
GRI 205: Anti-Corruption	205-1	Operations assessed for risks related to corruption	Governance and Integrity
	205-2	Communication and training about anti-corruption policies	Governance and Integrity
	205-3	Confirmed incidents of corruption and actions taken	Governance and Integrity
Economic Vitality of Communities and Supply Chain			
GRI 3: Material topics 2021	3-3	Management of material topics	Economic Vitality of Communities and Supply Chain
GRI 203: Indirect economic impacts 2016	203-2	Significant indirect economic impacts	Economic Vitality of Communities and Supply Chain
GRI 413: Local communities 2016	413-1	Operations with local community engagement, impact assessment, and development programmes	Economic Vitality of Communities and Supply Chain

GRI standard	Disclosure		Reference and response/ explanation for omission
Responsible Procurement			
GRI 3: Material topics 2021	3-3	Management of material topics	Responsible Procurement
GRI 308: Supplier Environmental Assessment 2016	308-1	New suppliers that were screened using environmental criteria	Responsible Procurement
GRI 414: Supplier Social Assessment 2016	414-1	New suppliers that were screened using social criteria	Responsible Procurement
Cybersecurity			
GRI 3: Material topics 2021	3-3	Management of material topics	Cybersecurity
GRI 418: Customer privacy 2016	418-1	Substantiated complaints concerning breaches of customer privacy and losses of customer data	Cybersecurity
Climate Risk Resilience			
GRI 3: Material topics 2021	3-3	Management of material topics	Climate Risk Resilience
GRI 201: Economic 2016	201-2	Financial implications and other risks and opportunities due to climate change	Climate Risk Resilience

Sustainability Accounting Standards Board (SASB) Real Estate Standards

SASB Code	Accounting Metric	Property Subsector	2024
IF-RE-130a.1	Energy consumption data coverage as a percentage of total floor area, by property subsector (%)	Data Centres	100%
		Offices	100%
IF-RE-130a.2	Total energy consumed by portfolio area with data coverage (GJ)	Data Centres	8,583,944
		Offices	4,120
	Total percentage grid electricity, by property subsector (%)	Data Centres	99.99%
		Offices	100%
	Total percentage renewable, by property sector (%)	Data Centres and Offices	78.5%
IF-RE-130a.3	Like-for-like percentage change in energy consumption for the portfolio area with data coverage, by property sector (%)	Data Centres	15%
IF-RE-130a.4	Percentage of eligible portfolio that has an energy rating (%)	Data Centres	Not applicable
		Offices	Not applicable
	Percentage for eligible portfolio that is certified to ENERGY STAR®, by property sector (%)	Data Centres	Not applicable
		Offices	Not applicable
IF-RE-130a.5	Description of how building energy management considerations are integrated into property investment analysis and operational strategy.	Data Centres and Offices	STT GDC ensures that its data centres are designed, managed, and maintained to meet energy, water, raw materials, waste, and atmospheric emissions standards.
IF-RE-140a.1	Water withdrawal data coverage as a percentage of total floor area (%)	Data Centres	100%
		Offices	Insufficient data. No data for India, Japan and Indonesia.
	Water withdrawal data coverage as a percentage of floor area in regions with High or Extremely High Baseline Water Stress, by property sector (%)	Data Centres and Offices	100%

SASB Code	Accounting Metric	Property Subsector	2024
IF-RE-140a.2	Total water withdrawn by portfolio area with data coverage (m^3)	Data Centres	1,146,979
		Offices	2,041
	Total water withdrawn by portfolio area with percentage in regions with High or Extremely High Baseline Water Stress, by property sector (%)	Data Centres	26%
		Offices	Insufficient data
IF-RE-140a.3	Like-for-like percentage change in water withdrawn for portfolio area with data coverage, by property sector (%)	Data Centres	10%
IF-RE-140a.4	Description of water management risks and discussion of strategies and practices to mitigate those risks	Data Centres and Offices	Water Stewardship
IF-RE-410a.1	Percentage of new leases that contain a cost recovery clause for resource efficiency related capital improvements (%)	Data Centres	0%
		Offices	0%
	Associated leased floor area that contain a cost recovery clause for resource efficiency related capital improvements, by property sector (m^2)	Data Centres	0
		Offices	0
IF-RE-410a.2	Percentage of tenants that are separately metered or sub metered for grid electricity consumption (%)	Data Centres	100%
		Offices	Not applicable
	Percentage of tenants that are separately metered or sub metered for water withdrawals, by property sector (%)	Data Centres	0%
		Offices	0%
IF-RE-410a.3	Discussion of approach to measuring, incentivising and improving sustainability impacts of tenants	Data Centres	No formal programmes in place at present
		Offices	No formal programmes in place at present
IF-RE-450a.1	Area of properties located in 100-year flood zones, by property sector (m^2)	Data Centres	Information not available
		Offices	Information not available
IF-RE-450a.2	Description of climate change risk exposure analysis, degree of systematic portfolio exposure, and strategies for mitigating risks.	Data Centres and Offices	Climate Risk Resilience
